UNIT 3 RAINBOW GLOW STICK CREATION

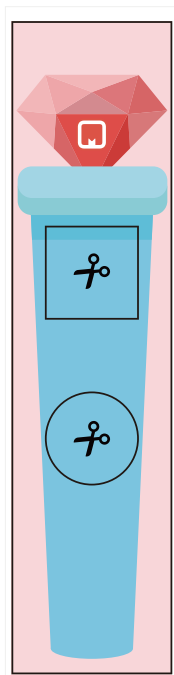

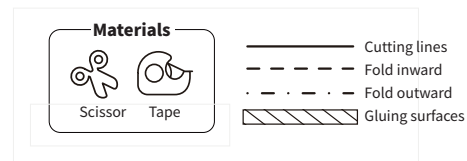

WHAT IS A RAINBOW GLOW STICK?

A Rainbow Glow Stick is a fun tool that lights up in different colors based on how you move it. To create our glow stick, we will use a battery, an IMU (a sensor that detects movement), and an LED light. The IMU will sense the angle of the glow stick, and the LED will change colors just like the rainbow!

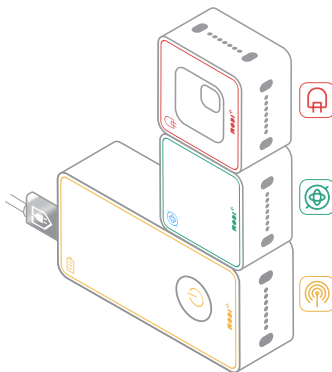

Materials Needed:

Activity: Create Your Own Rainbow Glow Stick

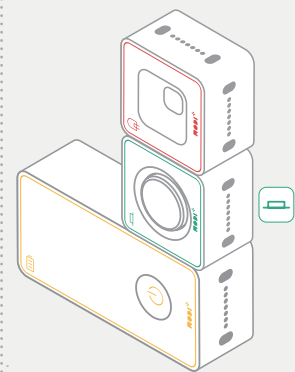

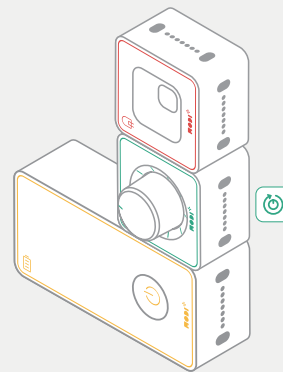

1. As shown in the picture, assemble the modules in the following order from bottom to top: network module, IMU module, and LED module.
2. Cut along the solid lines to create the rainbow glow stick. Then, use tape to attach and secure it to the assembled modules.

Replaceable Module

(A)
Can be replaced
with the Dial module

(B)
Can be replaced with the
Button module

Let's figure it out

Let's explain the results when we change the input module using pictures and words.

IMU
