UNIT 2 IF ELSE STATEMENT

✓ ELSE

condition 1
If it's raining outside,

task 1
Take an umbrella.

condition 2
Otherwise,

task 2
Leave it at home

If else statement is similar to the if statement; it just adds an else part, which means when the if condition is false, it follows a task in the else part.

EXECUTION IF FALSE While in most cases only the 'if' block is present, sometimes tasks can be specified to execute if the condition is false. Therefore, in this case, when the button is not clicked, the speaker makes the sound as High Do with 100% volume.

The main point of the if-else statement is to execute the actions specified in the else part if the condition of the if statement is not met!

Exercise

- 1 Change this code to if-else statement in Code Editor.

The code in the Scratch editor consists of a 'network' block, followed by a 'repeat forever' loop. Inside the loop, there is a 'turn off LED 1' block, followed by an 'if' statement. The 'if' statement has a condition: 'dial 1 turn > 50 %'. If the condition is true, it executes 'set LED 1 light to' with a red color swatch. To the right of the code area are several horizontal lines for notes.

- 2 Make the code in Code editor based on the story below:

We will make a sensor light, if an object is near by the sensor the light will be on! if not the LED is off.

The code in the Scratch editor consists of a 'network' block, followed by a 'repeat forever' loop. Inside the loop, there is an 'if' statement with a condition: 'ToF 1 distance < 15 cm'. If the condition is true, it executes 'set LED 1 light to' with a yellow color swatch. If the condition is false, it executes 'turn off LED 1'. To the right of the code area are several horizontal lines for notes.

By monitoring with ToF, Find the distance when you want to light it up!
