UNIT 1 BEFORE AND AFTER AUTOMATION

Imagine opening every door by yourself, or if elevators didn't exist and you had to climb up and down stairs every day. Before automation, many tasks were done manually. This meant people had to do everything by themselves—pushing doors, or lifting heavy objects. But now, thanks to automated systems, life has become much easier!

WHAT IS AN AUTOMATED SYSTEM?

An automated system is a machine or device that works independently. It uses sensors, motors, and computers to perform tasks without constantly needing someone to control it. This makes everyday activities faster and more convenient.

Life Before Automation:

OPENING DOORS

Before automatic doors, you had to push or pull every door by hand, even when your hands were full!

WASHING CLOTHES

Washing clothes used to mean scrubbing them by hand. It took a long time and was hard work.

CLIMBING STAIRS

Without elevators, people had to walk up and down many stairs to reach higher floors, which could be tiring.

Life After Automation:

AUTOMATIC DOORS

Thanks to sensors, doors can now open on their own when you approach them. It's faster and easier, especially when carrying things.

WASHING MACHINES

You can press a button, and the machine washes your clothes automatically. You don't have to spend hours scrubbing!

ELEVATORS

Elevators take you to higher floors with the press of a button. No more tiring stair climbs!

WHY IS AUTOMATION HELPFUL?

SAVES TIME AND EFFORT

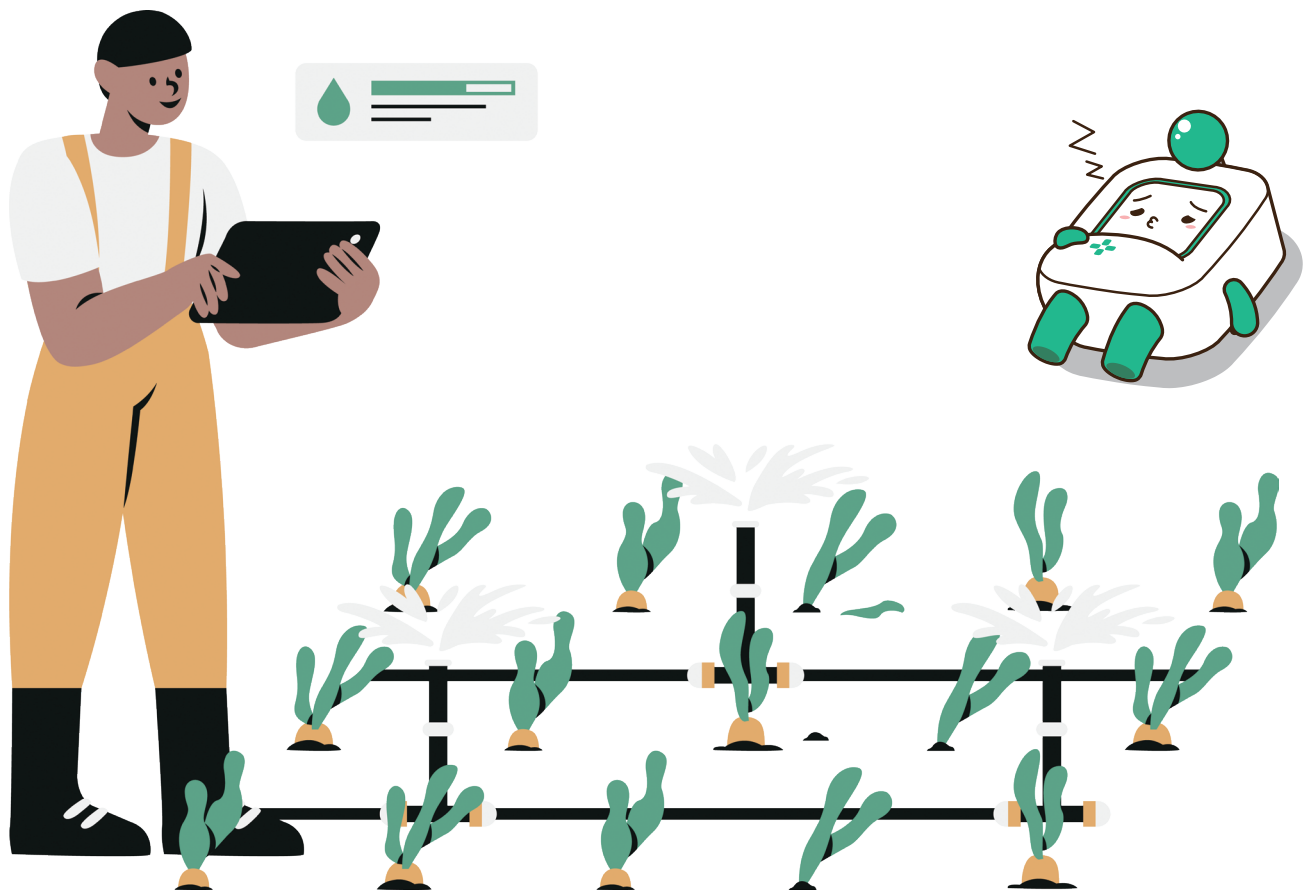

Automated systems do tasks for you, so you don't have to. This gives you more time for other activities.

MORE CONVENIENT

Whether doors open by themselves or machines do chores, automation simplifies things.

INCREASES SAFETY

Automated systems can also make things safer. For example, some machines stop by themselves if they detect a problem.

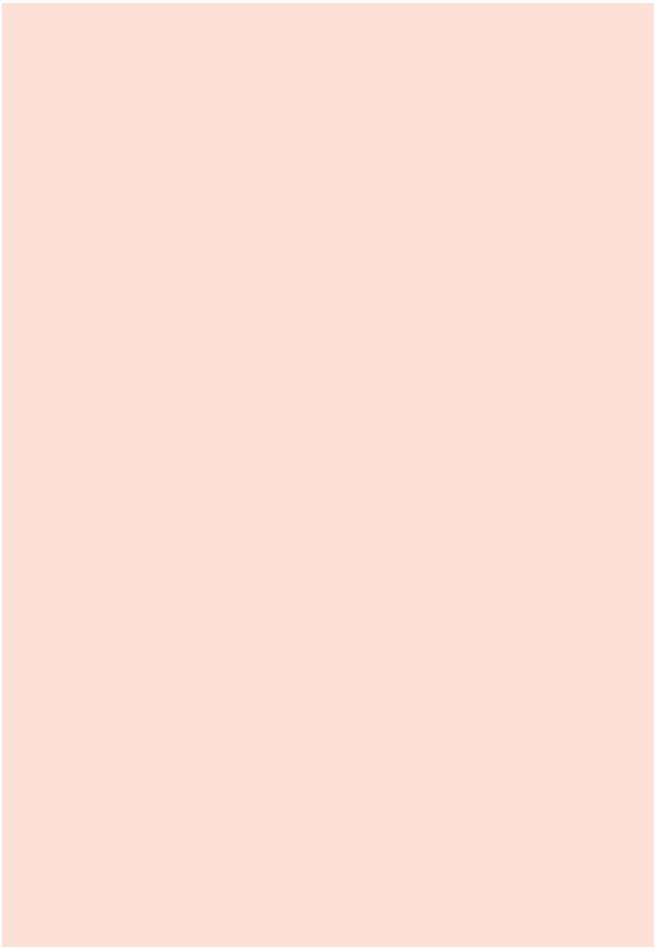

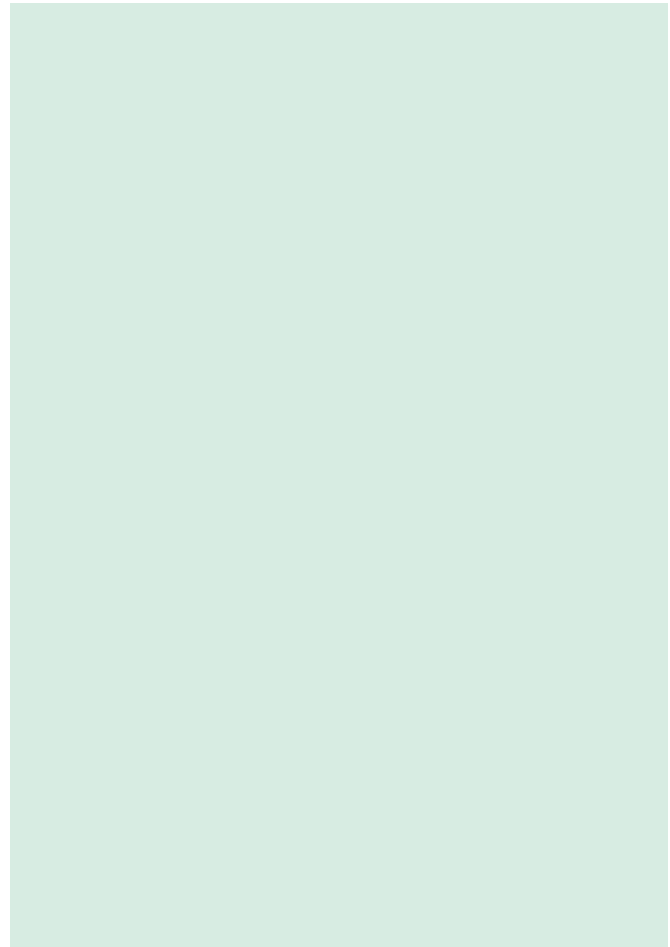

●● Activity: Compare the Past and Present! _____

Think of one task people used to do manually, like opening a door or washing clothes. Draw a picture of how it was done before automation and another photo showing how we do it now with automated systems. How is it more accessible with automation?

Past

Present

This version explains how life has changed with automation, comparing the manual past with the convenience of automated systems in a way that third graders can understand and relate to.
