UNIT 3 BUILDING YOUR OWN AUTOMATIC WOOD CUTTER

In this activity, you will create a Wood Cutter that works automatically when you press a button! Imagine a machine where a knife moves on its own to cut wood without needing your hands to push it—that's precisely what we're going to make.

HOW DOES IT WORK?

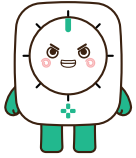

When you press the button, the knife moves up and down automatically. This is an example of automation. Automation means something works independently without you having to do all the work. Machines like this are used in factories to help people do their jobs faster and easier.

Before automation, people had to move tools like knives by hand, which took time and energy. With automated machines, everything happens with the push of a button! This makes tasks quicker and safer, just like your Wood Cutter.

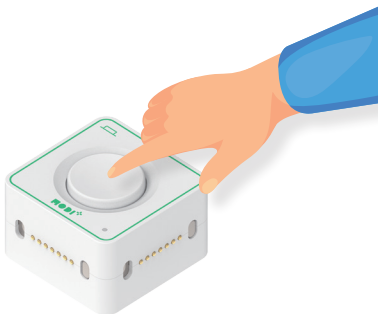

Do you remember which action Button can received?

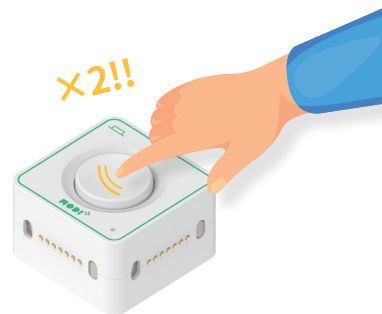

Button can receive 4 types of information.

1. CLICK

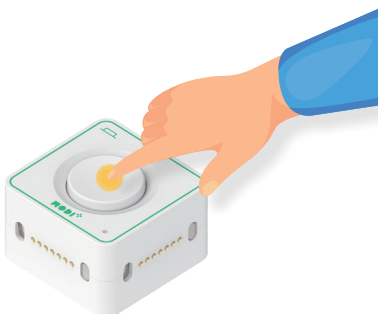

Detects if Button is clicked or not.

2. DOUBLE CLICK

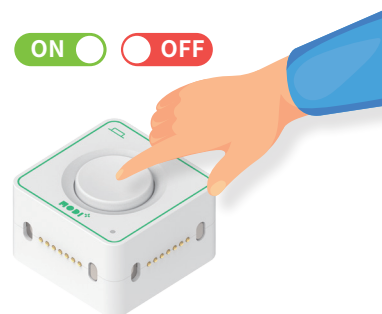

Detects if Button is double - clicked or not.

3. PRESS

Show the press status of Button.

4. TOGGLE

Changes on / off when Button is clicked.

Activity: Create Your Own Automatic Wood Cutter

1 Materials Needed:

Network

Button

Motor A

I - Horn

2 Code story

Set Motor A's I-Horn angle to 0

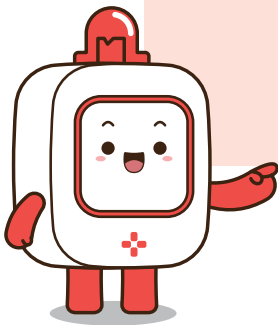

When we click the Button

Set Motor A's I-Horn angle to 110

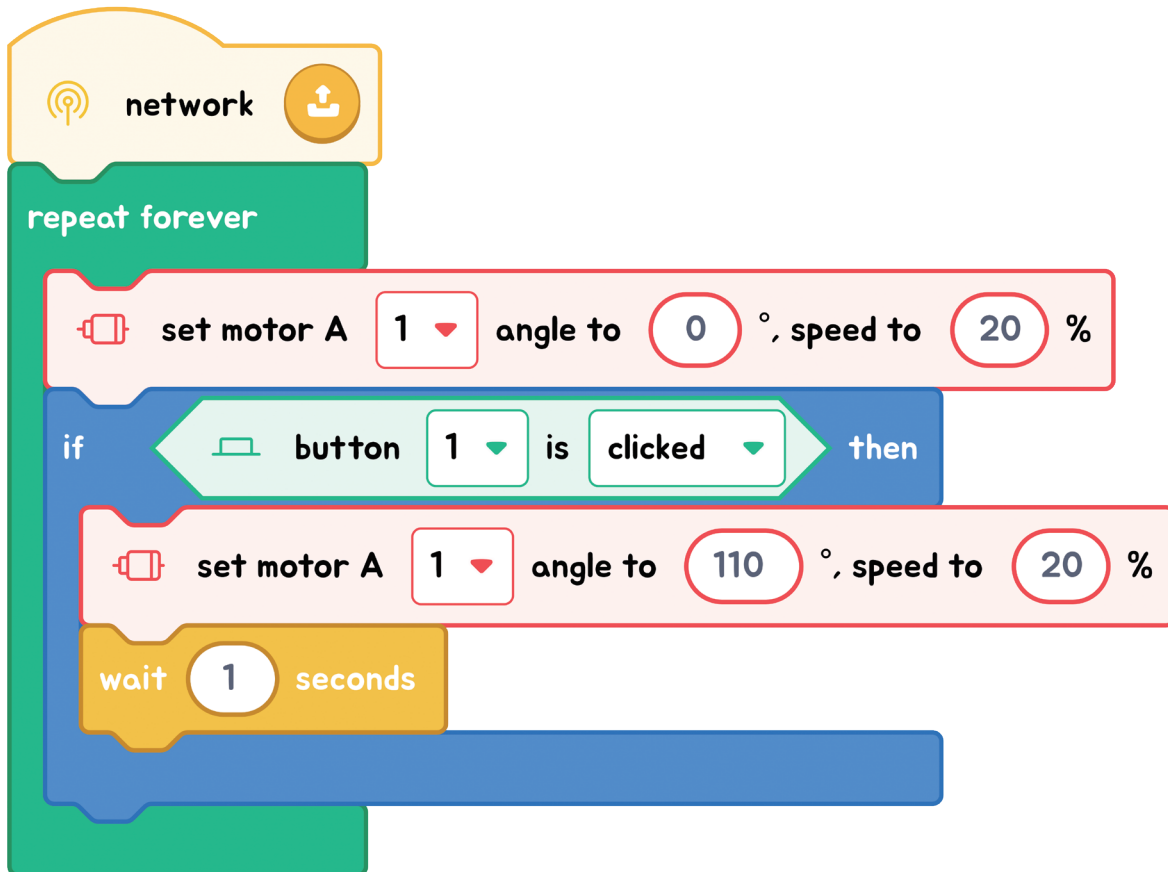

Wait for 1 second

Code Quest

Checkpoint

If we change the angle what will happen?

110 → 80	110 → 160
