UNIT 1 HOW INDICATOR LIGHTS WORK

WHAT IS AN INDICATOR LIGHT?

An indicator light is a small light that shows us important information. In the case of a restroom, an indicator light helps us see whether the restroom is in use or not. Typically, a red light means "occupied" and a green light means "vacant." These lights help us know when we can use the restroom without needing to knock on the door.

There are many indicator lights in our daily lives, and traffic lights are one example. What are some other examples?

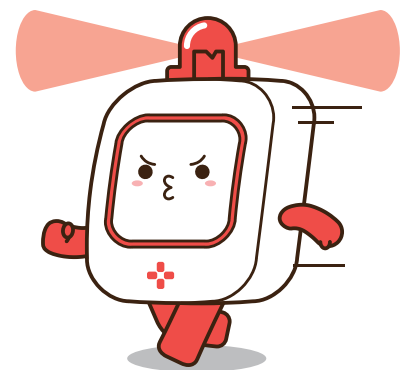

HOW DOES IT WORK?

The indicator light is connected to the restroom door. When the door is locked from the inside, a simple system triggers the red light to turn on, showing that someone is using the restroom. When the door is unlocked, the light changes to green, letting others know the restroom is free.

WHY ARE INDICATOR LIGHTS IMPORTANT?

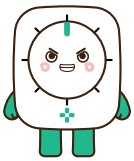

Indicator lights make things easier and faster for everyone. Instead of waiting or guessing, you can quickly see from the light whether the restroom is available. This helps prevent confusion and saves time, especially when there are many people waiting to use the restroom.

Activity: Spot the Indicator Light

Can you find indicator lights around you? Discuss with your friends or family where you've seen them before (such as in elevators or buses) and what colors they show to give information.

For example, we can see the sign in restroom like this!
