This PDF document is included in the unit materials.

## UNIT 4 CODE QUEST

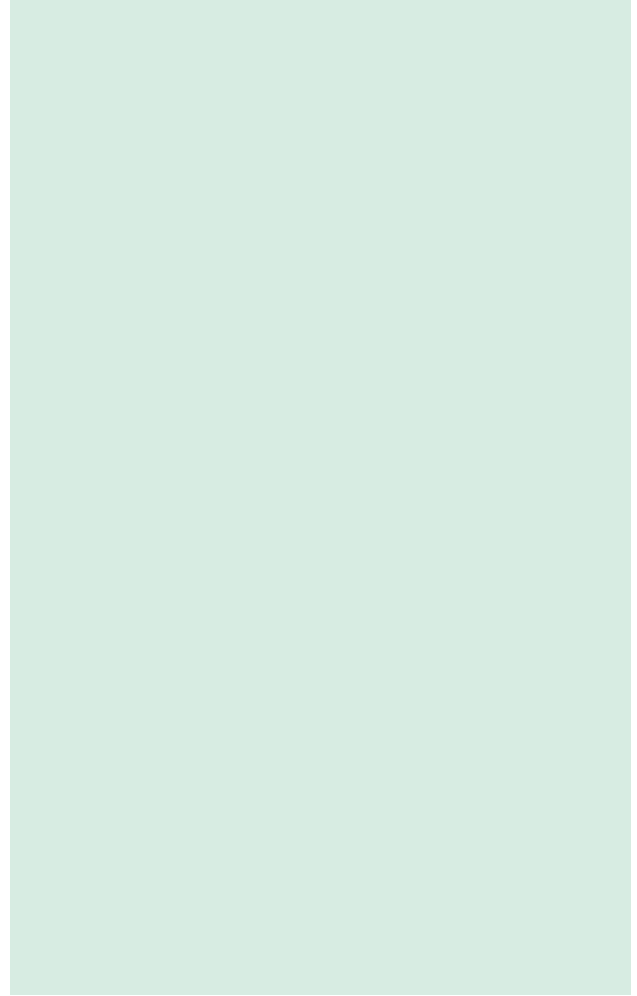

### Applying Knowledge (code & debugging)

#### CODE

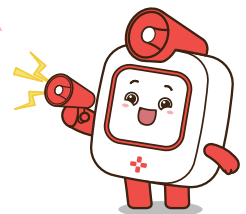

**DEBUGGING**

- 1 What if a button is clicked instead of pressed?
- 2 What if 'turn off' blocks are missing in a program?

**THINK ABOUT IT!**

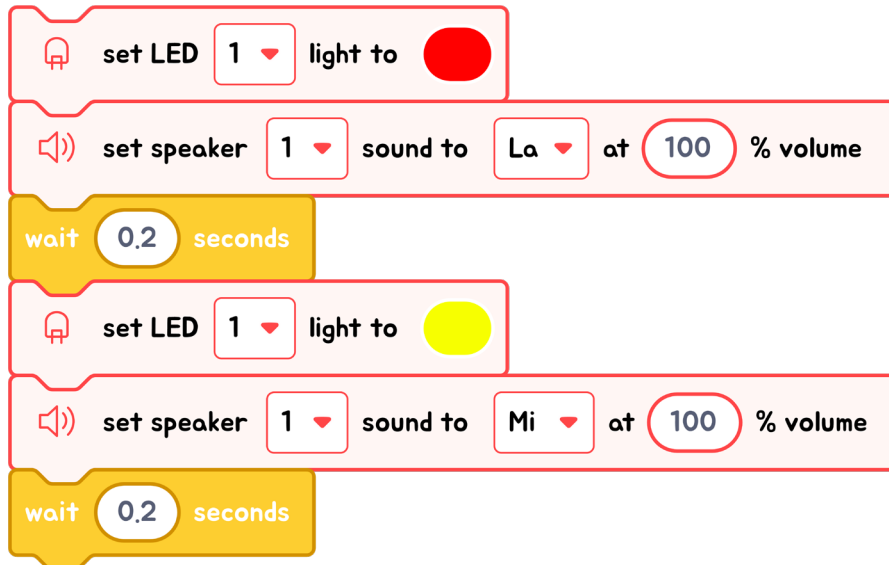

Imagine you're in an emergency during an earthquake. Consider whether the questions above would help you better utilize the alarm system!

## Missions

### Mission1

- 1 **Set the Alarm Duration:** Let's configure the alarm to sound for 4 seconds and then stop automatically.

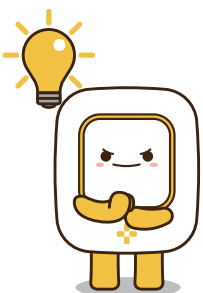

Time for a single alarm cycle: \_\_\_\_ secs

For a 4-second duration, the alarm should repeat \_\_\_\_ times.

- 2 Based on the number you filled in the blank, modify the code accordingly.

#### TIPS

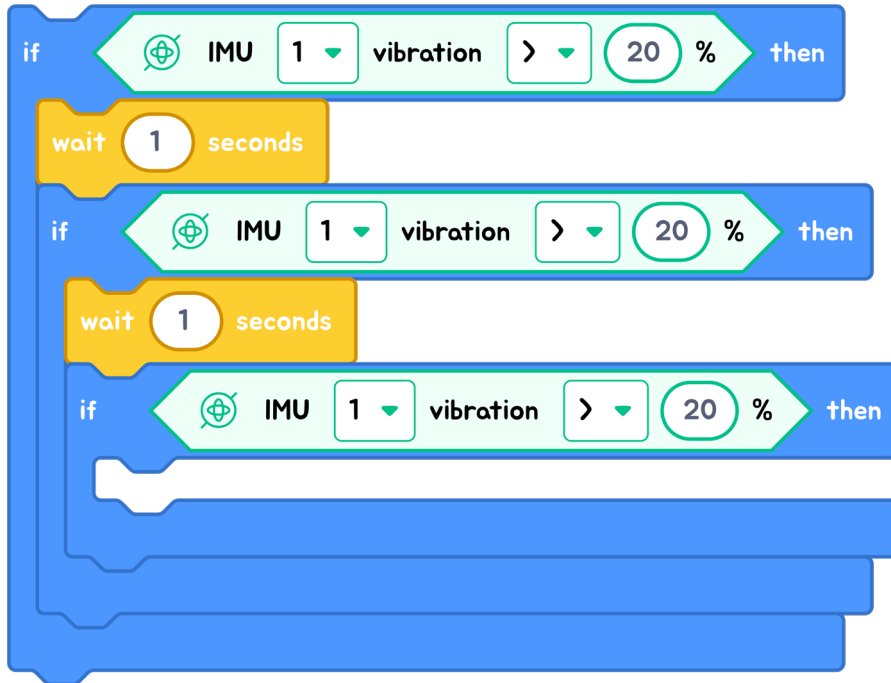

Since this requires a repeat statement, locate the appropriate block under the 'Repeat' tab!

## Misson2

- Adjustable Vibration Sensitivity:** Let's enable the vibration threshold to be adjusted at any time using a dial.

### TIPS

Find a suitable dial value to enter in the blank.

- Refer to the figure provided and update the code as necessary.
