## UNIT 4 CODE QUEST

### Applying Knowledge (code & debugging)

#### CODE

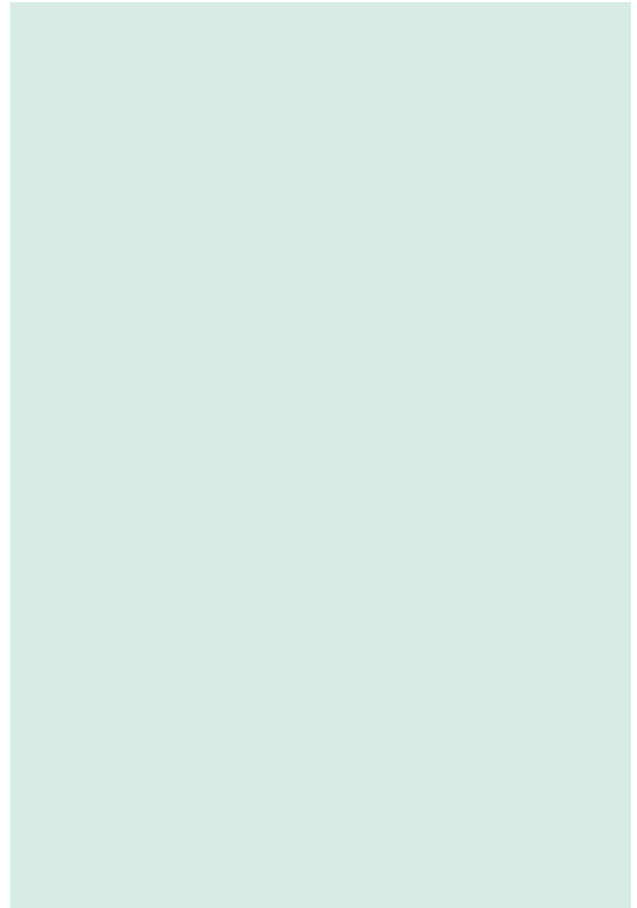

## DEBUGGING

1 What if the 'wait' block is missing?

2 What if we didn't add 1 to  $8 \bmod 6$ ?

## Missions

### Mission 1

- 1 Set the dial to below 50% and obtain the results of 10 trials. Write down the numbers obtained, and calculate the probability of each number from 1 to 6.

| Number | Probability |
|--------|-------------|
| 1      |             |
| 2      |             |
| 3      |             |
| 4      |             |
| 5      |             |
| 6      |             |

- 2 Set the dial to over than 50% and obtain the results of 10 trials. Write down the numbers obtained, and calculate the probability of each number from 1 to 6.

| Number | Probability |
|--------|-------------|
| 1      |             |
| 2      |             |
| 3      |             |
| 4      |             |
| 5      |             |
| 6      |             |

- 3 Compare the results between 2 and 3. Why is the probability different, and is the probability the same as what you expected?
