UNIT 4 CODE QUEST

Applying Knowledge (code & debugging)

CODE

DEBUGGING

1 Why do we divide height as 100?

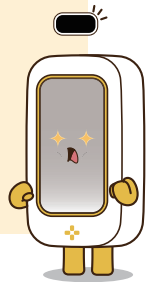

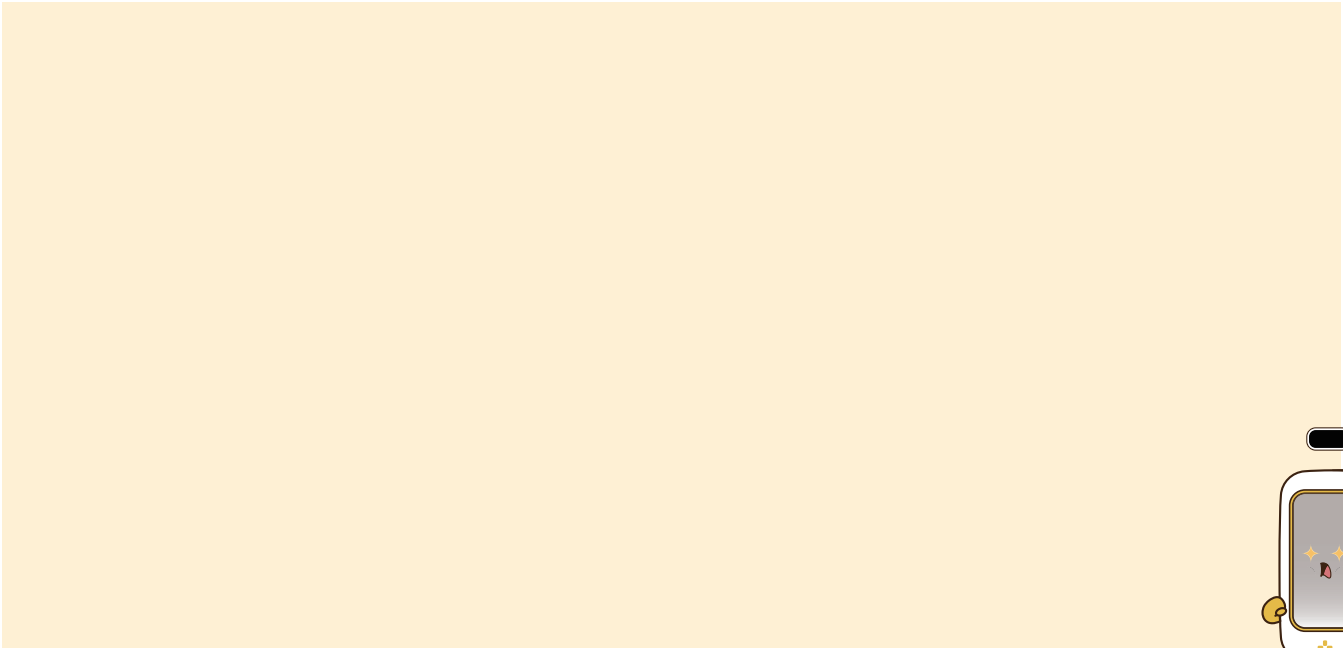

2 What would happen if we change 'until' to 'while'?

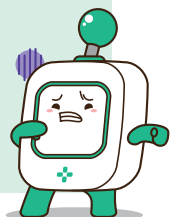

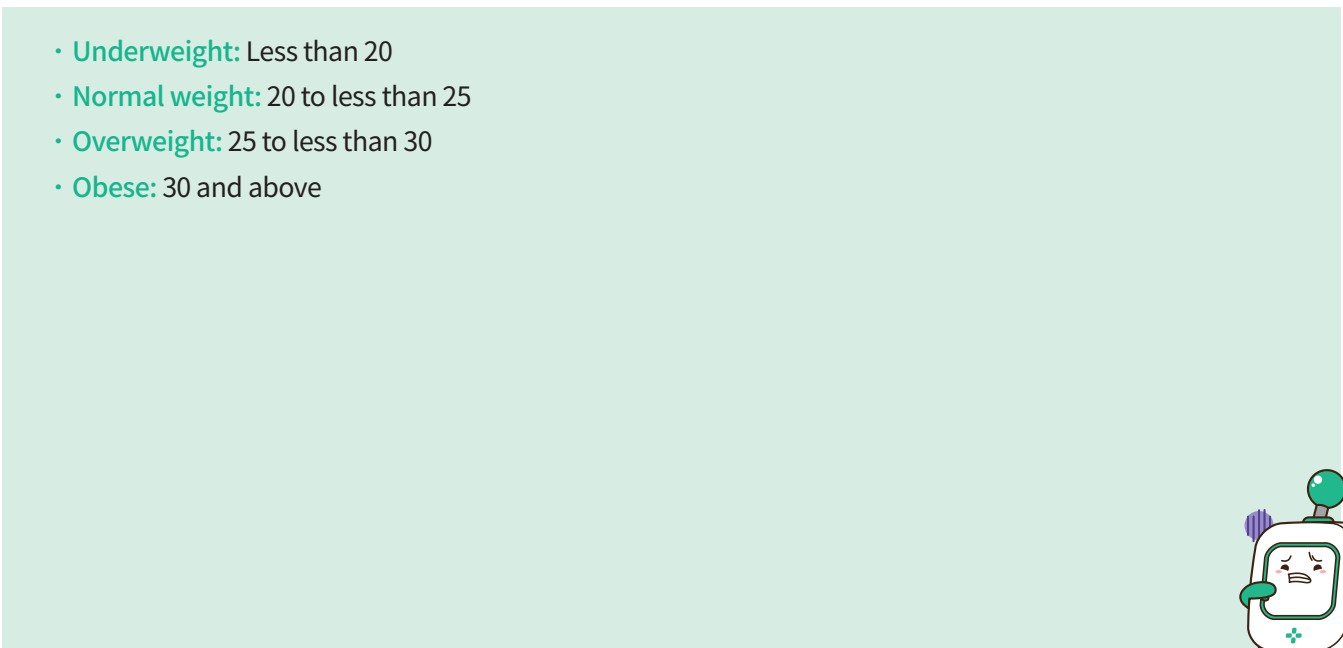

**MISSION 1**

- 1 Display the BMI value rounded to the nearest whole number.

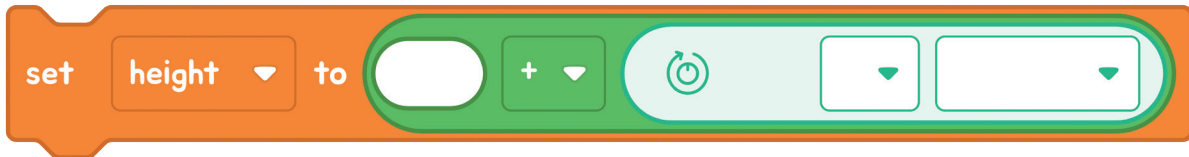

- 2 Let's display the result based on the BMI value:

- **Underweight:** Less than 20
- **Normal weight:** 20 to less than 25
- **Overweight:** 25 to less than 30
- **Obese:** 30 and above

MISSION 2

- 1 To calculate BMI without dividing by 100, modify the code so that when setting the height using a Dial, the calculation properly considers the units.

- 2 When the button is double-clicked, exit the forever loop and recalculate the new BMI.
