## UNIT 4 CODE QUEST

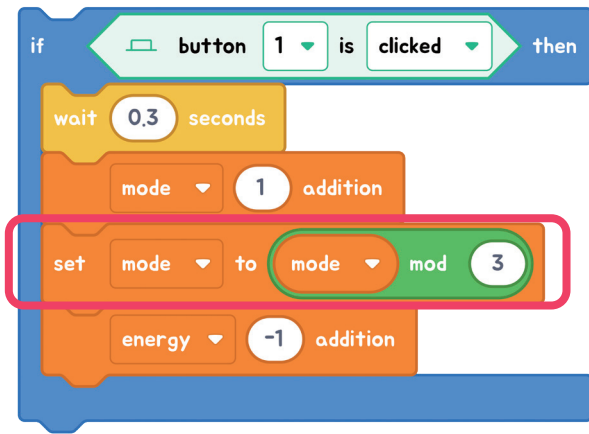

### Applying Knowledge (code & debugging)

#### CODE

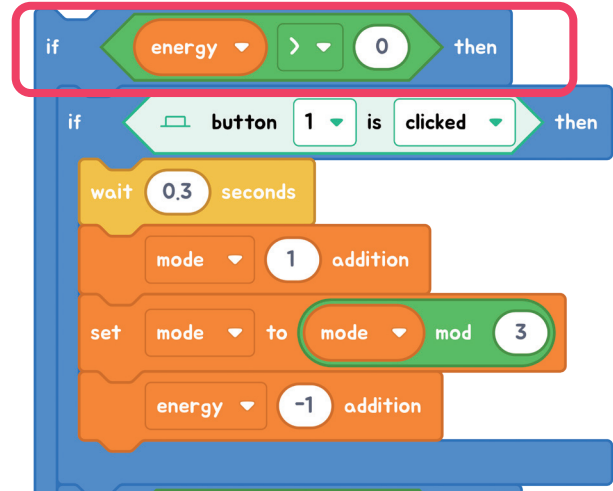

## DEBUGGING

1 Why do we mod variable 'mode' with 3?

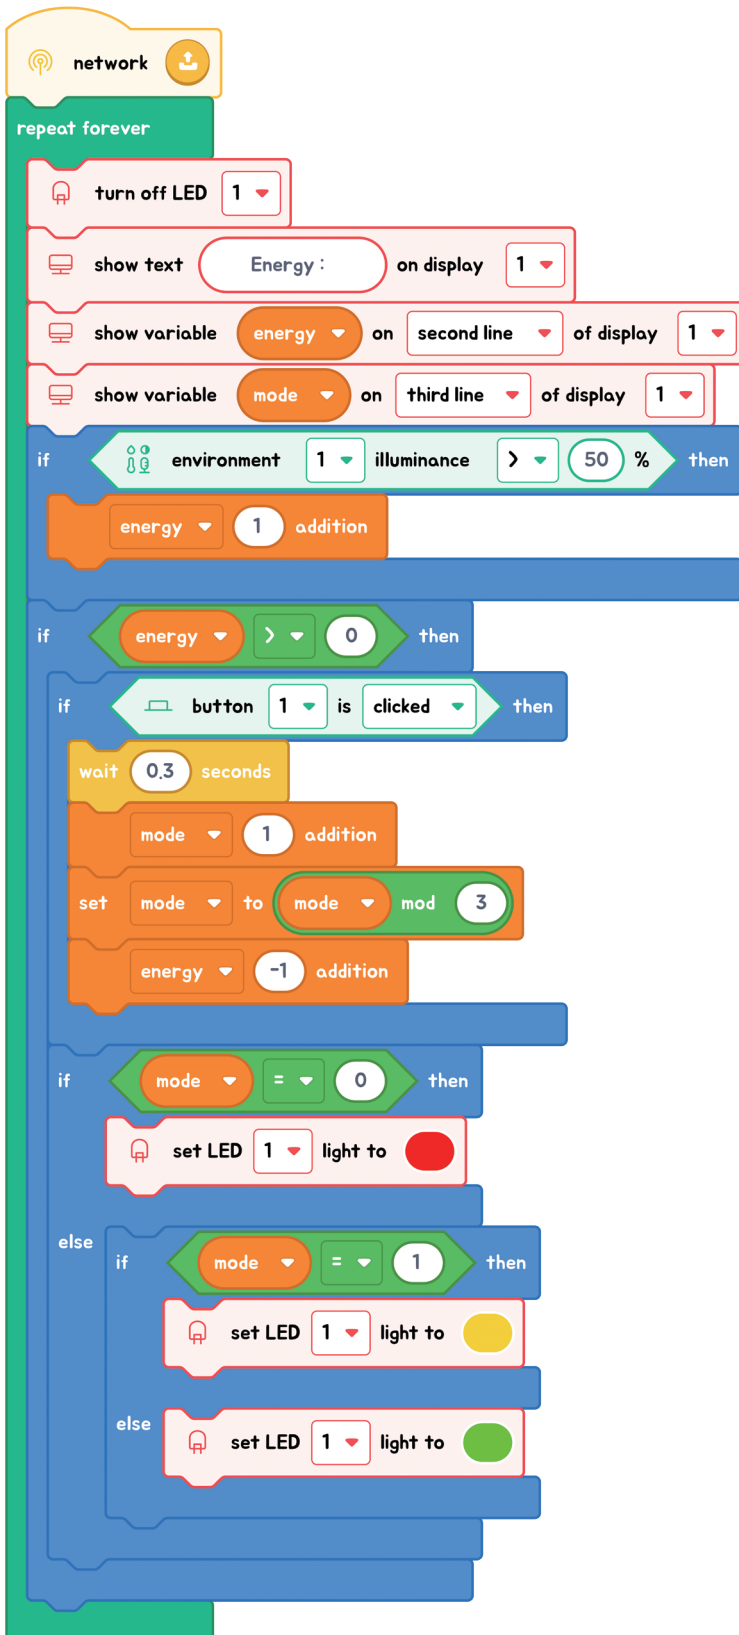

2 What is the role of the marked block?

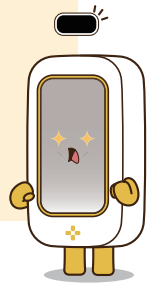

## MISSION 1

1 In which part and how should it be modified to change the mode option from 1 to 3?

## MISSION 2

- 1 Modify the code so that if the variable 'energy' is less than 0, the LED turns off.

- 2 In the Display, indicate that energy is needed, and modify the code so that when the LED turns back on, the red light is the first to illuminate.
