UNIT 7 PRESENTATION

Unit Introduction

Get ready to share your project with others by preparing a presentation. You'll show what you made, explain how you did it, and talk about what you learned!

What Is a Presentation?

Why Presenting Your Project Is Important

When you finish a project, it's important to share it with others. A presentation is a way to show what you've done, explain how it works, and talk about the challenges you faced. It's also a great chance to practice speaking in front of others, which is a skill you'll use throughout your life.

Presenting helps you think about your project in a new way. By explaining it to others, you understand it better yourself. Plus, it's fun to show off your hard work!

Organizing Your Presentation

Making Your Presentation Easy to Follow

A good presentation is like telling a story. Here's how to organize it:

1. Introduction

- Start by saying who you are and what your project is.
- Explain what your smart device does and why you made it.

2. Project Overview

- Briefly describe the steps you took to build your device.
- Mention the key parts, like the MODI modules you used.

3. Challenges & Solutions

- Talk about any problems you ran into.
- Explain how you solved them.

4. Results

- Share how your device worked in the end.
- Mention if it did what you wanted and if you made any changes.

5. Conclusion

- Reflect on what you learned from the project.
- Talk about how this experience helped you grow and what new skills you gained.

6. Q&A

- Be ready to answer questions from your audience.
- Think about what questions they might have and how you would answer them.

Example

Imagine you've built a Smart Plant Watering System. You've worked hard to make sure it waters the plants when the soil gets too dry. Now, it's time to show your classmates and teacher what you've done.

In your presentation, you would:

- **Introduce your project:**
 - "My project is a Smart Plant Watering System. It automatically waters plants when the soil is dry."
- **Explain how it works:**
 - "The device uses a humidity sensor to check the soil's moisture. If the soil is too dry, the sensor tells the water pump to start."
- **Share what you learned:**
 - "I learned how to connect different parts like sensors and motors, and how to solve problems when they didn't work at first."

TIPS FOR TESTING THE PROJECT

- Through your presentation, you'll help others understand your project, and you'll get to practice important skills like explaining your ideas clearly and confidently.

Making Visual Aids

How to Create PowerPoint or Google Slides

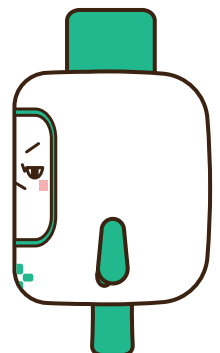

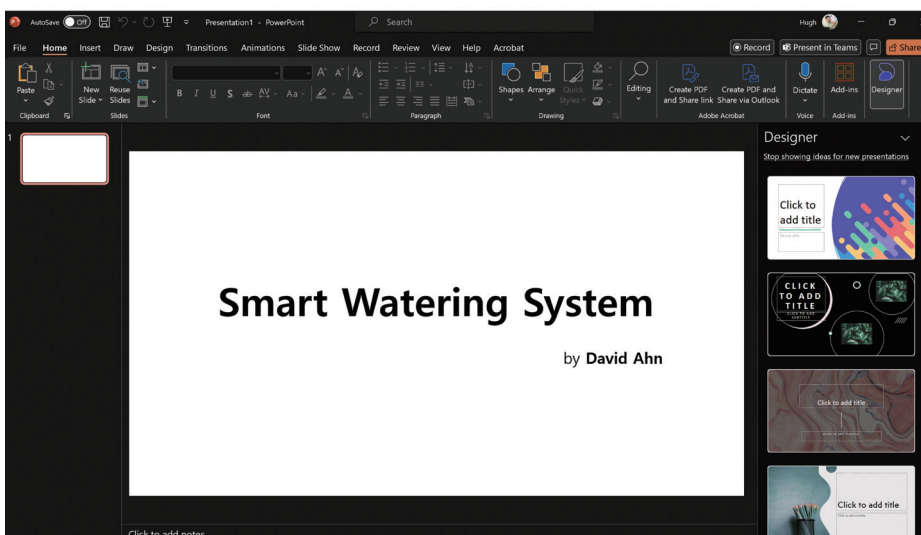

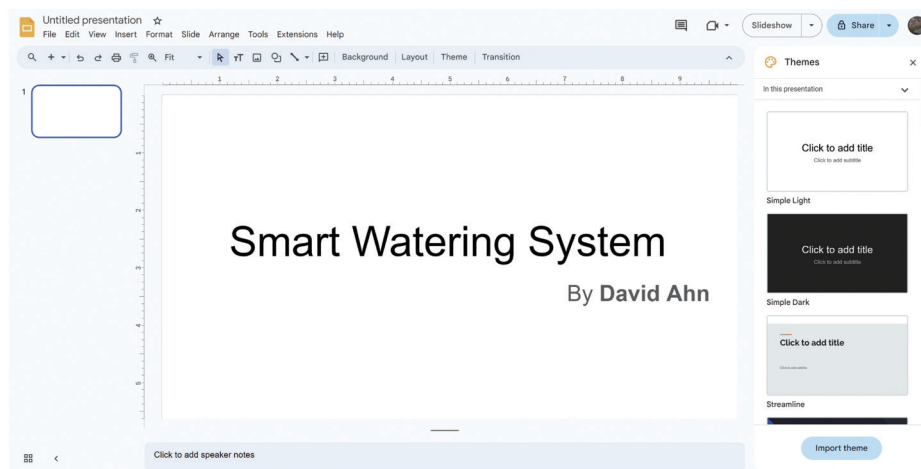

Creating slides is a great way to make your presentation more interesting. Here's a simple guide to help you make your slides:

Step 1: Start with a Title Slide

- What to Include: The first slide should have the title of your project and your name.
- Tip: Keep it simple. Use a large, clear font for the title.

Microsoft PowerPoint

Step 2: Add a Slide for Each Section

- What to Include: Make one slide for each part of your presentation: Introduction, Project Overview, Challenges and Solutions, Results, and Conclusion.
- Tip:
 - Use bullet points to list the key points. Keep the text short so it's easy to read.

Step 3: Use Pictures and Diagrams

- What to Include: Add pictures of your project or diagrams that explain how it works.
- Tip:
 - Place the pictures next to the text that explains them. Make sure they're big enough to see clearly.

Table of Contents

- 1) Introduction
- 2) Project Overview
- 3) Challenges and Solutions
- 4) Results
- 5) Conclusion

Introduction

- Project: Smart Plant Watering System
- Purpose: Automatically waters plants when soil is dry
- Why I Chose This Project: To help take care of plants easily

Project Overview

- Used MODi modules: Humidity sensor, Water pump, Battery
- Connected the parts to work together
- Tested the device to make sure it works*

Challenges and Solutions

- Problem: Water pump didn't start
- Solution: Found and fixed a loose wire
- ∴ Improved the device after testing

Results

- Device works as planned
- Waters plants when soil is dry
- Plants stay healthy

Conclusion

- Learned about using sensors and motors
- Solved problems and improved my project
- Excited to use these skills in future projects

Practice Your Presentation

Step 4: Practice with Your Slides

- What to Include: Go through your slides as you practice your presentation.
- Tip:
 - Make sure each slide matches what you're saying. The slides should help you explain your project, not distract from it.

Presenting in front of many people may make you feel nervous. However, it is important to keep practicing your presentation skills. Presenting your ideas to the world can sometimes give you unexpected opportunities.

Presentation

Check the list below before your presentation! Once everything is checked, you're ready to present!

BRIEF PRESENTATION CHECKLIST

1) Slides Ready:

- ☐ Title slide with your name and project.
- ☐ Slides for each section: Introduction, Overview, Challenges, Results, Conclusion.
- ☐ Pictures and diagrams included.

2) Practice Done:

- ☐ Practiced out loud multiple times.
- ☐ Timed your presentation.
- ☐ Received feedback from someone.

3) Content Prepared:

- ☐ Clear explanation for each slide.
- ☐ Ready to discuss challenges and solutions.
- ☐ Prepared for audience questions.

4) Delivery Ready:

- ☐ Speaking clearly and confidently.
- ☐ Making eye contact with your audience.
- ☐ Demonstration (if needed) is set.

5) Final Checks:

- ☐ Project and materials ready.
- ☐ Feeling confident and prepared.
