UNIT 5 DESIGNING SOLUTIONS

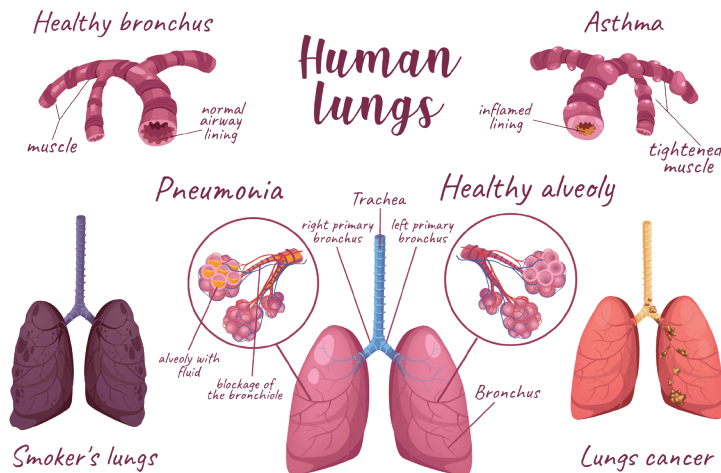

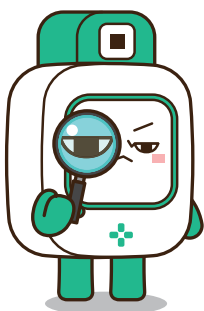

Your Lungs: The Powerhouses of Your Body

Introduction Have you ever wondered how you can run around and play without getting tired? Or how you can sing your favorite songs? It's all thanks to your lungs! Your lungs are like tiny air factories inside your body that help you breathe. In this article, we'll dive deep into the world of your lungs and discover how they work.

What do lungs do? Imagine your lungs as two big balloons inside your chest. When you breathe in, these balloons fill up with air. This air carries oxygen, a special gas that your body needs to turn food into energy. When you breathe out, you get rid of carbon dioxide, a waste gas that your body doesn't need.

WHY ARE LUNGS IMPORTANT?

- **Energy** : Your lungs provide the oxygen your body needs to turn food into energy. Without enough oxygen, you would feel tired and weak.
- **Waste removal** : Your lungs help your body get rid of carbon dioxide, a waste product.
- **Protection** : Your lungs help to filter out harmful particles in the air, like dust and germs.

TAKING CARE OF YOUR LUNGS

- **Breathe clean air** : Avoid places with lots of pollution.
- **Exercise regularly** : Exercise helps your lungs work more efficiently.
- **Don't smoke** : Smoking damages your lungs and can cause serious health problems.
- **Wash your hands** : This can help prevent you from getting sick and damaging your lungs.
