UNIT 1 EXPLORING THE CORE

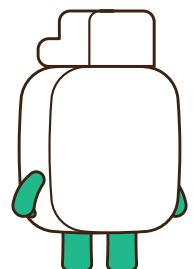

Topic Investigation

THE IMPORTANCE OF GOOD SLEEP

Good sleep is essential for maintaining our overall health. When we get enough quality sleep, our bodies can rest and repair, helping us feel refreshed and ready for the day. Poor sleep can lead to various health problems, including difficulty concentrating, mood swings, and even long-term issues like heart disease.

How do you feel after a good sleep?
Do you feel refreshed and energetic?
Discuss the benefit of good sleep with
your classmates!

Benefits of Good Sleep

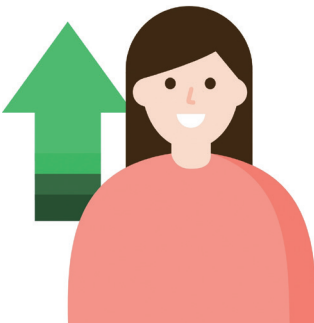

Better Focus - Improved Concentration and Learning

When you get a good night's sleep, your brain has time to rest and prepare for the next day. This helps you concentrate better in school and remember what you've learned. Good sleep makes it easier to focus on tasks and solve problems, which can help you do better on tests and in class.

More Energy - Increased Energy Levels

Quality sleep gives your body the energy it needs to perform well in both physical and mental activities. When you sleep well, you wake up feeling refreshed and ready to tackle the day, whether it's playing sports, studying, or just enjoying your hobbies.

Happier Mood - Better Mood and Emotional Well-being

This can happen from sitting for too long without moving around. Sitting for long periods can cause the muscles in the front of the hips to become tight and the muscles in the back to become weak, which can lead to lower back pain.

Healthier Body - Strengthened Immune System

During sleep, your body produces proteins called cytokines that help fight off infections, inflammation, and stress. Good sleep strengthens your immune system, making it easier for your body to fight off illnesses like colds and the flu.

Effects of Poor Sleep

REDUCED ABILITY TO CONCENTRATE

- When you don't get enough sleep, it becomes harder to focus on your schoolwork and other tasks. Poor sleep can lead to forgetfulness and difficulty understanding new information, making it harder to do well in school.

DECREASED ENERGY AND MOTIVATION

- Lack of sleep can make you feel tired and sluggish throughout the day. You may find it difficult to stay active and engaged, whether in the classroom, on the playground, or during after-school activities.

INCREASED IRRITABILITY AND MOOD SWINGS

- Not getting enough sleep can make you feel grumpy, frustrated, or even sad. Poor sleep affects your ability to manage emotions, leading to mood swings and making it harder to get along with others.

WEAKENED IMMUNE SYSTEM

- Without enough sleep, your body produces fewer protective proteins, which can weaken your immune system. This makes you more vulnerable to getting sick and can make it harder for your body to recover from illnesses.

How Snoring Affects Sleep

Snoring can disturb both the snorer and anyone else nearby. It often disrupts the natural sleep cycle, leading to a restless night and not feeling well-rested in the morning. Understanding what causes snoring and how to manage it is crucial for improving sleep quality.

OBSTRUCTIVE SLEEP APNEA

- This condition occurs when the airway becomes blocked during sleep, causing loud snoring and pauses in breathing.

MOUTH BREATHING

- Snoring often happens when a person breathes through their mouth instead of their nose while sleeping.

SLEEPING POSITION

- Sleeping on your back can cause the tongue to fall back and partially block the airway, leading to snoring.

Questioning the Details

Sleep Score Evaluation Chart

Let's think about your sleep habits and the quality of your sleep by answering the questions below. These questions will help you evaluate your sleep score.

Question	Yes (2 Points)	Sometimes (1 Point)	No (0 Points)
1. Do you get at least 8-10 hours of sleep every night?	☐	☐	☐
2. Do you wake up feeling refreshed and ready to start the day?	☐	☐	☐
3. Do you fall asleep easily within 15-30 minutes of going to bed?	☐	☐	☐
4. Do you sleep soundly through the night without waking up often?	☐	☐	☐
5. Do you feel energetic and focused throughout the day?	☐	☐	☐
6. Do you avoid using screens (like phones or tablets) at least 30 minutes before bedtime?	☐	☐	☐
7. Do you have a consistent bedtime routine that helps you relax before sleep?	☐	☐	☐

- 12-14 Points: Excellent! You have great sleep habits that help you stay healthy and energetic.
- 7-11 Points: Good, but there's room for improvement. Think about the areas where you answered "Sometimes" or "No" and how you might improve those habits.
- 0-6 Points: Needs Improvement. Your sleep habits may be affecting your health. Try to make some changes to get better sleep and feel more rested.

Inquiry & Reflection

Discussion Question 1

How do you think your sleep habits could affect your ability to learn new things at school?

Discussion Question 2

What changes could you make to your bedtime routine to improve your sleep quality, and how do you think those changes might affect your health?
