UNIT 5 EXPANDING KNOWLEDGE ON THE TOPIC

Tech and Sleep: A Good Night's Rest

Imagine a world without smartphones, tablets, or computers. Can you? It's hard to think about, right? Technology is a big part of our lives. It helps us learn, play games, and stay connected with friends. But did you know that all this screen time can affect our sleep? Let's dive deeper into how technology can help and harm our sleep.

The Blue Light Effect : Have you ever heard of blue light? It's a type of light emitted from electronic devices like phones, computers, and TVs. This blue light can trick our brains into thinking it's daytime, making it harder for us to fall asleep.

The Sleep Cycle Our bodies have a natural sleep-wake cycle. This cycle tells our bodies when it's time to be awake and when it's time to sleep. The blue light from our devices can mess up this cycle.

TIPS FOR BETTER SLEEP

- 1 Create a Screen-Free Zone :** Try to avoid screens for at least an hour before bedtime.
- 2 Use Night Mode :** Many devices have a night mode setting that reduces the amount of blue light emitted.
- 3 Read a Book :** Instead of scrolling through your phone, try reading a book. It's a great way to relax.
- 4 Create a Relaxing Bedtime Routine :** Doing the same things every night before bed can signal to your body that it's time to wind down.
