UNIT 5 FLOWCHART

A flowchart is like a treasure map that guides us through different steps to reach a goal. We use shapes like circles and arrows to connect these steps, just like putting together puzzle pieces.

A flowchart is like a smart map that guides us step by step to finish a task successfully.

Daily Example: Recipe Steps

THINK ABOUT A RECIPE:

It starts by telling you to mix flour and sugar, then to add eggs, and so on. If you skip a step, like adding salt, the flowchart has a spot where it asks you a 'Yes' or 'No' question, such as 'Did you add salt?'

This helps you remember to go back and add it if you forgot. The flowchart continues guiding you step by step until your cookies are perfectly baked and ready to enjoy. It's a great tool to ensure you follow each step correctly

Understanding Flowcharts

Flowcharts in programming follow specific shape rules to create a universal visual language. This standardization allows programmers worldwide to understand and use flowcharts consistently, ensuring clear communication and collaboration across different regions and languages.

Symbol	Name	Function
	Start/end	An oval represents a start or end point
	Arrows	A line is a connector that shows relationships between the representative shapes
	Process	A rectangle represents a process
	Decision	A diamond indicates a decision
	Or symbol	As described, this shape indicates that the process flow continues on two or more paths.

Flowchart Example

EXAMPLE: PROTEIN SHAKE FLOWCHART

Exercise

Exercise 1: Umbrella Decision Flowchart

Let's make a simple flowchart to decide if we need an umbrella before going outside:

- 1. Start:** Think about leaving the house.
- 2. Check the Weather Forecast:** Is it raining?
 - Yes: Take an Umbrella.
 - No: Look outside.
- 3. Check the Sky:** Does it look like it might rain later?
 - Yes: Maybe take an umbrella, just in case.
 - No: You're all set to go without one.
- 4. End:** You've made your choice, and you're ready to go.

YOUR FLOWCHART

Exercise 2: Create a Flowchart from Code

Look at the code below. **Turn this code into a flowchart**, showing each step and choice along the way.

**YOUR FLOWCHART**
