UNIT 3 DESIGNING SOLUTIONS

Programming Concepts

IF ELSE STATEMENT

An 'If-Else' statement is like an 'If' statement with a backup plan. If the 'If' part isn't true, then the 'Else' part takes over and does something else instead.

✓ ELSE

condition 1
If it's raining outside,

task 1
Take an umbrella.

condition 2
Otherwise,

task 2
Leave it at home

Imagine you're deciding whether to bring an umbrella. An 'If-Else' statement can help you with this!

If it's raining outside (this is the condition), you'll take an umbrella (this is the task). Otherwise (this is the Else part), you'll leave the umbrella at home. So, even though we only consider rain, Else takes care of everything else by default.

The key to 'If-Else' is that if the 'If' condition isn't met, the program will do what's in the 'Else' part instead.

Flowcharts & Algorithms

Let's read the flowchart and create the code.
