UNIT 4 CODE QUEST

Applying Knowledge (code & debugging)

CODE

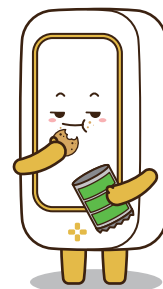

DEBUGGING

1 Is there any problem when running the above code?

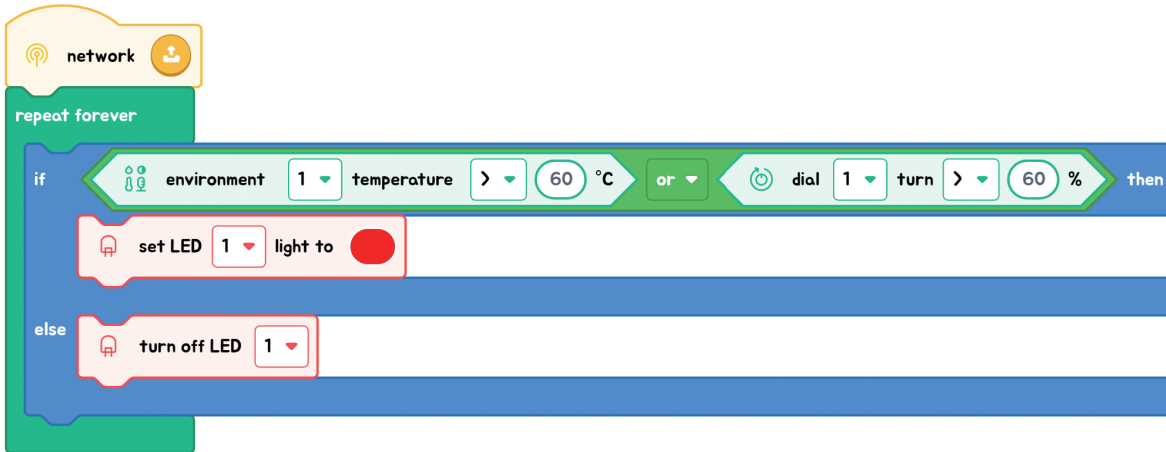

TIPS

- Reason to use Time Code: It is possible to issue a warning as soon as the measured temperature is reached, but it is better to issue a warning when a dangerous temperature occurs continuously. This increases reliability.

CODE

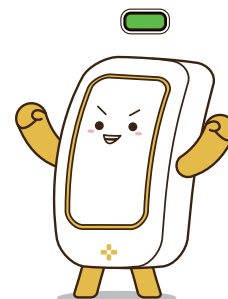

DEBUGGING

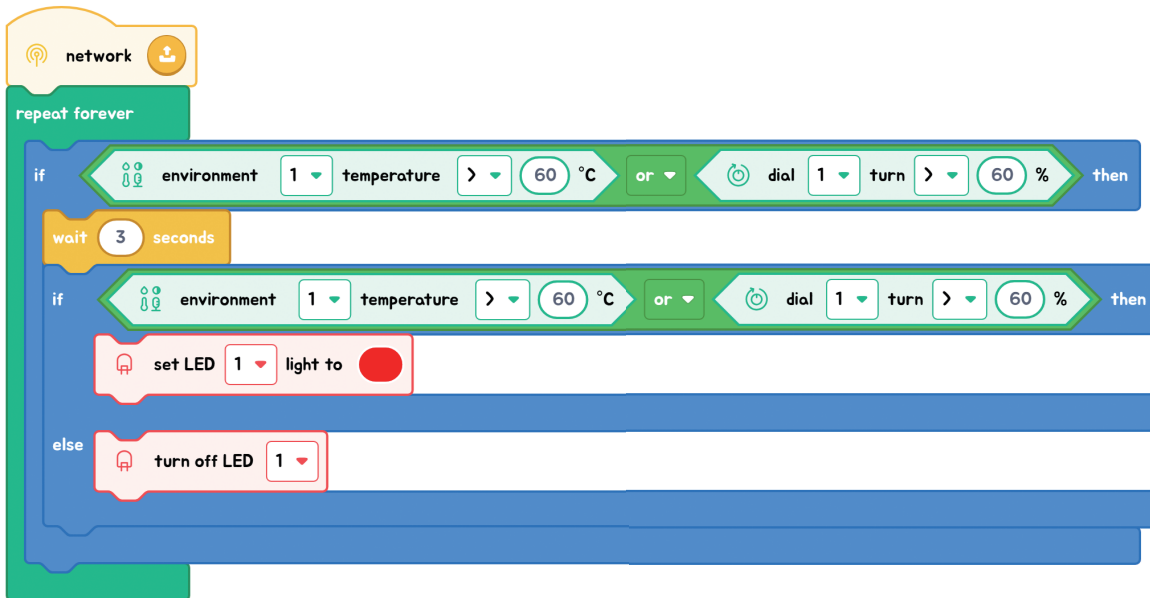

2 What will happen if the wait blocks are absent?

TIPS

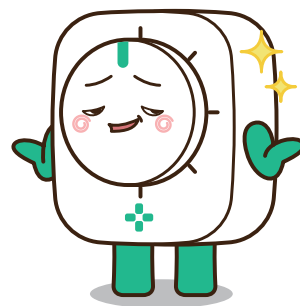

The LED turns on briefly even though the light went off 3 seconds ago.

CODE

Coding with time and overlap has improved the functionality a lot.
Translate

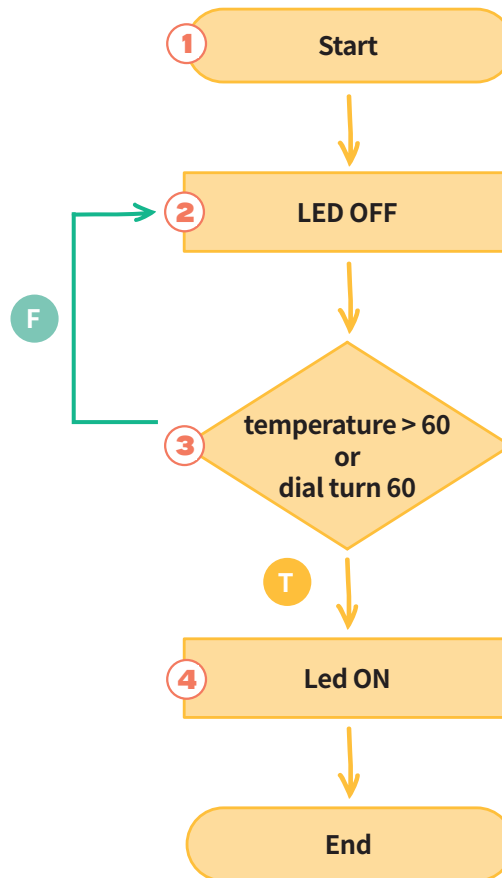

Missions

Mission 1

- 1 Try modifying the code to make the LED blink when turned on.
1-1. Write down which part of numbers 1 to 4 and how to change it.

- 1-2.** Let's implement it as code based on the modified algorithm.

Mission 2

2 Consider what features you want to add to your visual fire alarm.

2-1. Let's implement it as code based on the modified algorithm.

2-2. Modify the code to complete the function, and explain how you modified it to achieve that functionality.
