UNIT 1 THE STORY OF CARS - HOW IT ALL BEGAN

THE BIRTH OF THE AUTOMOBILE

A long time ago, people had to walk everywhere or use animals like horses to get around. This was tiring and took a lot of time. Then, something amazing happened – the invention of the automobile, or the car! The first cars were very different from the ones we see today. They were slow and hard to control, but they changed the way people traveled forever.

HOW PEOPLE CONTROLLED EARLY CARS

Steering Wheel

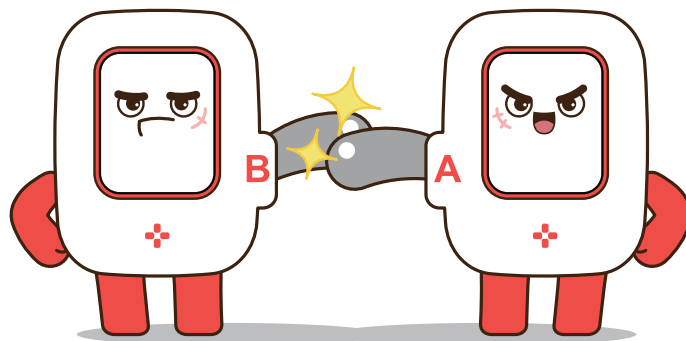

Pedals (Brake, Gas)

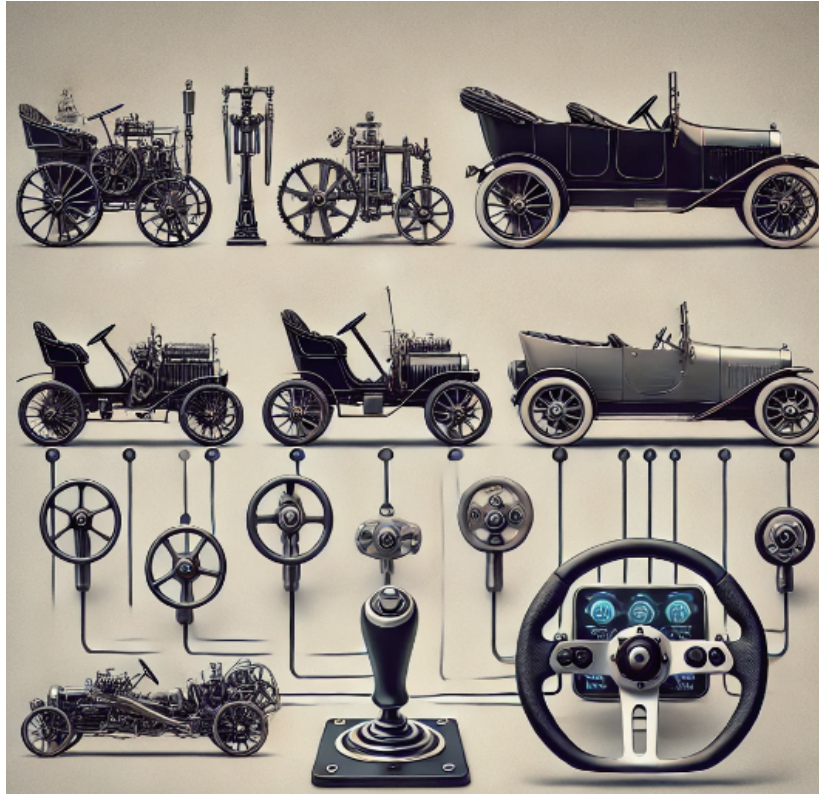

The very first cars didn't have joysticks or even the steering wheels we use today. Drivers had to control the car using levers and cranks. It wasn't easy! Over time, inventors figured out better ways to control cars, like adding steering wheels, pedals, and brakes. This made driving much smoother and easier.

STEERING WHEEL The round wheel that helps the driver turn the car.

GAS PEDAL Pressing this pedal makes the car go faster.

BRAKE PEDAL Pressing this pedal slows the car down or stops

HOW PEOPLE CONTROLLED EARLY CARS

As cars became more popular, inventors kept improving them. They added new features to make cars safer and easier to drive. Over time, technology like power steering, automatic transmissions, and cruise control made it even simpler for people to control their cars. Now, cars can even drive themselves with the help of computers!

FROM WHEELS TO JOYSTICKS

Cars have come a long way from their early days with levers and cranks. Now, with new technology like joystick controls, driving is becoming more accessible and easier for everyone. As we move forward, you'll learn how to control your own MODI car with a joystick, and who knows? Maybe one day you'll be driving a real joystick-controlled car!

Activity: Think About It!

Can you imagine driving a car with a joystick? What do you think would be different compared to using a steering wheel and pedals?

What other kinds of vehicles or machines might use joysticks for control?

HINT!

about drones, airplanes, or robots!
