UNIT 3 BUILDING YOUR WIPER SYSTEM

What is a windshield wiper?

A windshield wiper is a mechanical device on a vehicle's windshield that removes rain, snow, and ice to improve visibility.

COMPONENTS:

Blade: The rubber part that actually wipes the windshield

Motor: The component that powers the wiper

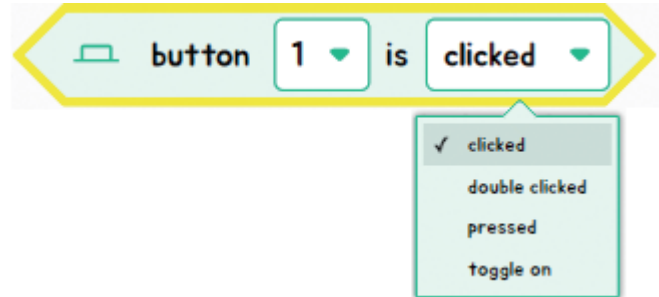

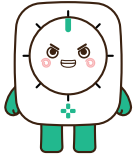

HOW IT WORKS IN ACTION:

In this exciting project, we're going to build a wiper using MODI motors and I-horns! Imagine you're an engineer designing a new car. You'll learn how to make a wiper that moves back and forth just like the ones on a real car.

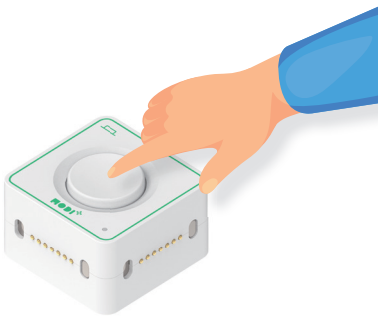

Do you remember which action Button can received?

Button can receive 4 types of information.

1. CLICK

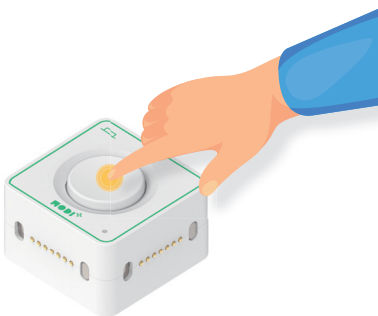

Detects if Button is clicked or not.

2. DOUBLE CLICK

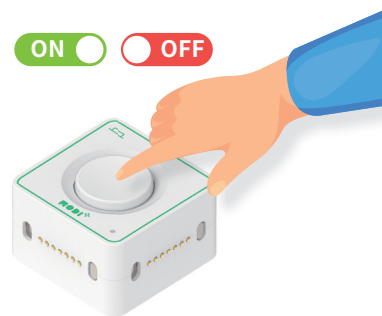

Detects if Button is double - clicked or not.

3. PRESS

Show the press status of Button.

4. TOGGLE

Changes on / off when Button is clicked.

Materials Needed

Network

Button

Motor A

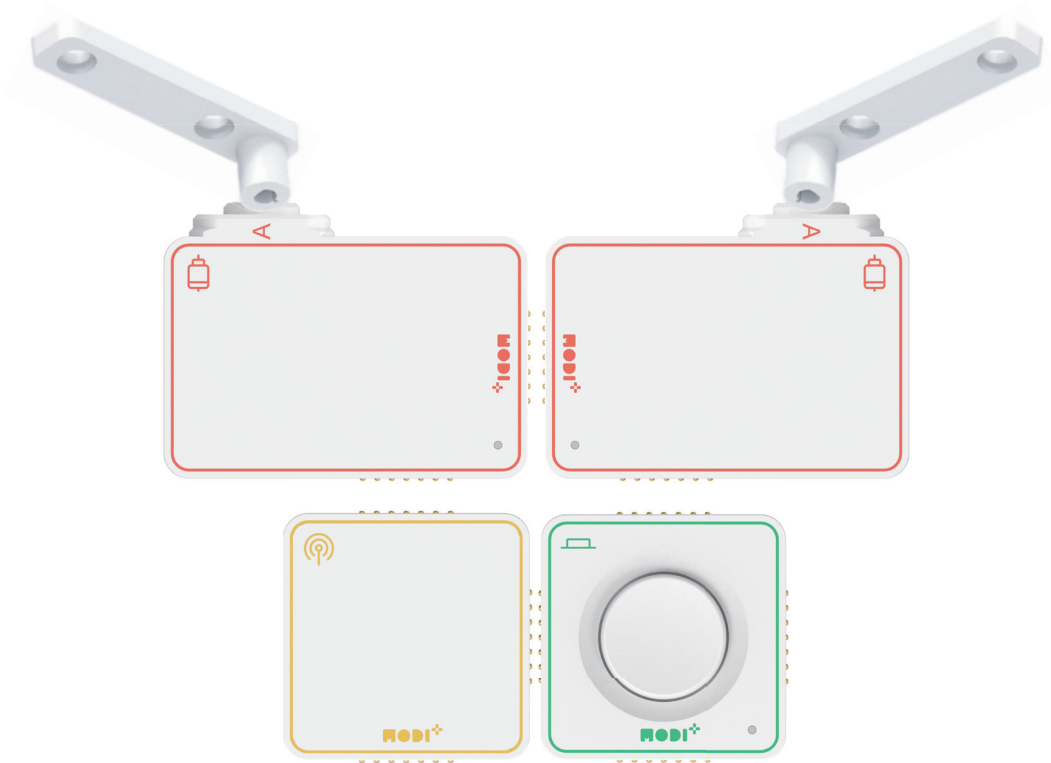

Motor B

I-Horn ×2

When we combine all the modules, a creation has to look like this.

Code Story

Set Motor A's I-Horn angle to 0

If Button's toggle is on

Set Motor A and B's angle to 180 to counterclockwise

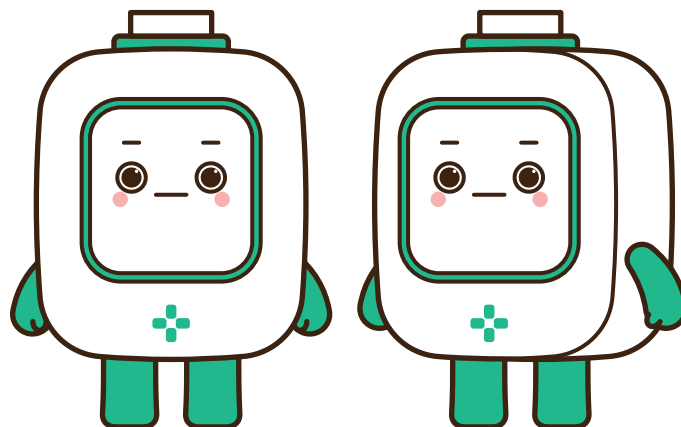

Wait for 1 second

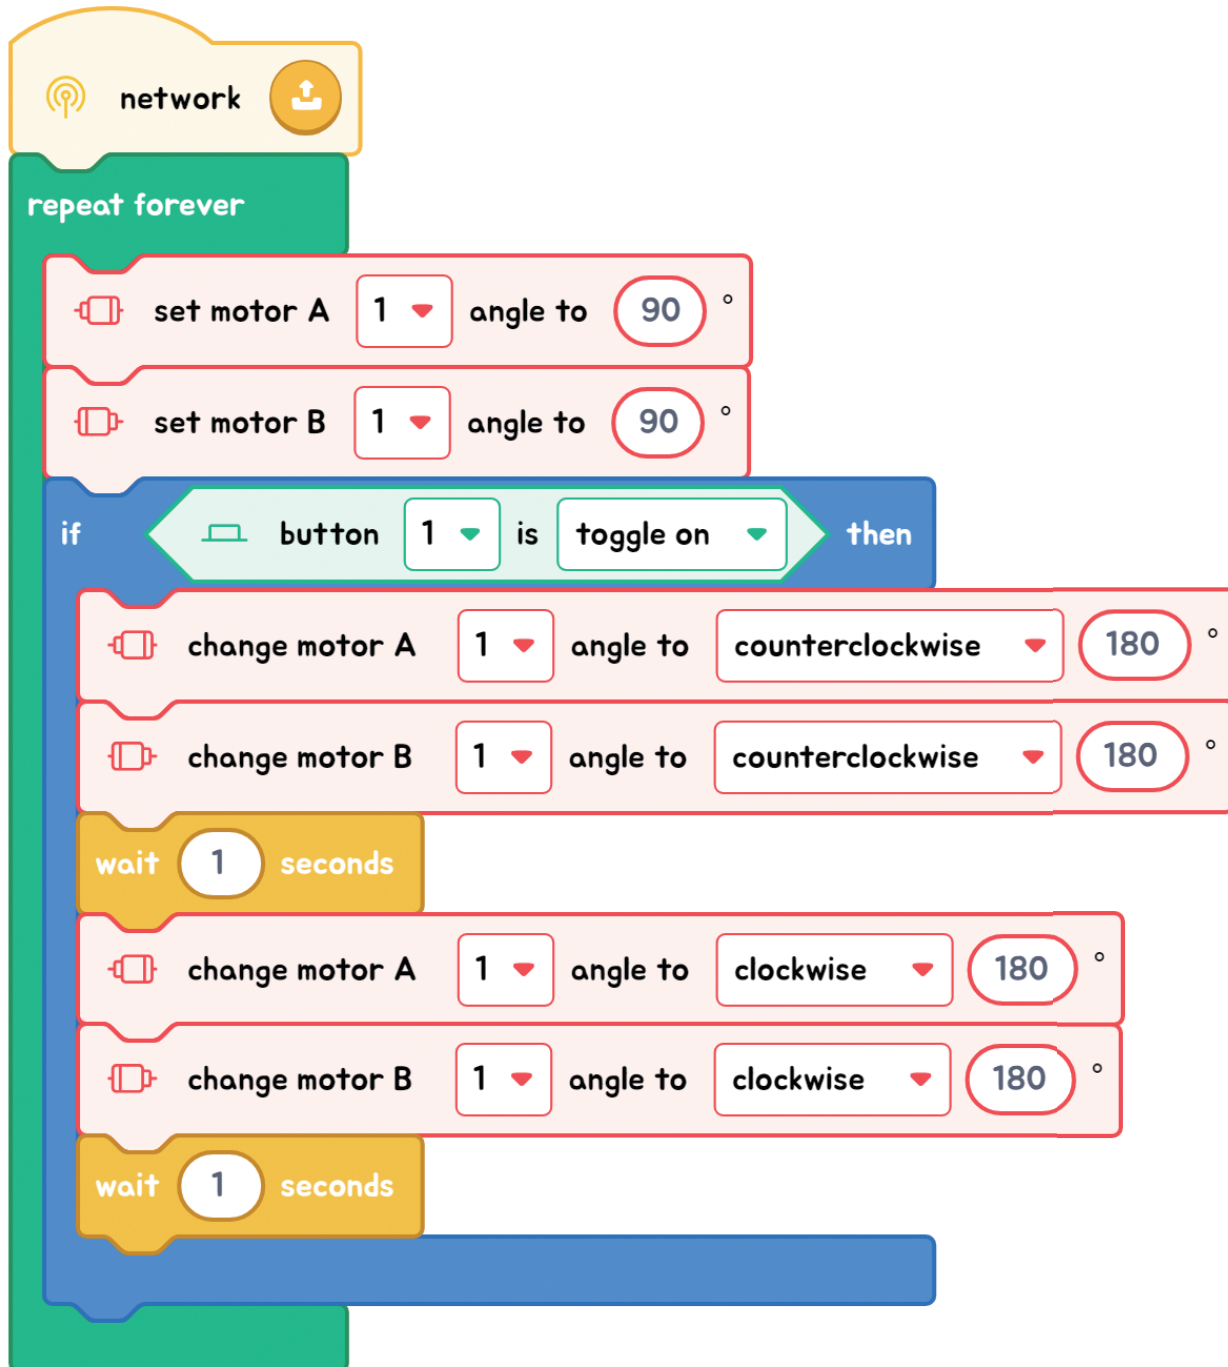

Set Motor A and B's angle to 180 to clockwise

Wait for 1 second

Code Quest**Checkpoint**

Which block do we have to change to move wipers to move slowly?
