UNIT 2 TYPES AND ROLES OF LIGHTING

Lighting is a tool that brightens dark places, helps us see objects, and distinguishes colors. We can see lighting everywhere, including in homes, schools, streets, cars, and parks. Lighting doesn't just make things bright; it also creates an atmosphere and makes certain activities more convenient.

EXAMPLE

When reading a book, Lighting helps us see the text.

When walking at night: It lights up the path so we can walk safely.

During a party: Colored lights make the atmosphere fun and exciting.

2 TYPES OF LIGHTING

There are various types of lighting. Let's look at a few common ones:

Natural Light: This is light we get from nature, like sunlight. Most of the light we see during the day comes from the sun.

Artificial Light: This is light made by people. Examples include light bulbs, LED lights, and fluorescent lights.

3 COLORS OF LIGHTING

Lighting also comes in various colors, giving off a warm or cool feeling.

Warm Lighting: Yellow or orange lighting creates a cozy atmosphere, often used in homes.

Cool Lighting: White or blue lighting is excellent for focus, making it suitable for schools or hospitals.

4 SHAPES OF LIGHTING

The shape of lighting can also significantly affect its role. Let's explore different shapes and see where they are often used:

① Ceiling Lights

Ceiling lights are installed on the ceiling to brighten an entire room evenly. They are commonly used in places like homes, schools, and hospitals, where many people gather. Ceiling lights are bright enough to make every corner of a room visible.

② Desk Lamps

Desk lamps are placed on desks and are usually used when studying or reading. They focus light on a specific area, making text or objects easy to see. Since the light is not too intense, it's gentle on the eyes at night.

③ Wall Lights

Wall lights are attached to walls, adding a soft atmosphere to rooms or hallways. They are often used in slightly darker spaces, like in-home corridors or cafes, to create a relaxed feel.

④ Portable Lights (Lanterns, Flashlights)

These are lights you can carry, used when you need a bit of light in dark places. They are convenient for camping or nighttime activities and for walking down a dark path. They're small and lightweight, making them easy to carry around.

Activity

Let's imagine and create lighting that fits a specific place! Think about the light color you would choose and the shape of the lighting fixture. Let your imagination run free and draw your ideas!
