UNDERSTANDING COMPARISON OPERATORS

UNIT 1 INTRODUCTION TO COMPARISON OPERATORS

WHAT ARE COMPARISON OPERATORS?

In math, we sometimes want to see if one thing is bigger, smaller, or the same as another. To do this, we use special symbols called "comparison operators." These symbols help us compare numbers, like how we compare the number of toys or how tall we are with our friends.

Here are three important comparison operators:

GREATER THAN ($>$) This symbol means "bigger than."

For example, $5 > 3$ means that 5 is bigger than 3.

LESS THAN ($<$) This symbol means "smaller than."

For example, $2 < 4$ means that 2 is smaller than 4.

EQUAL TO ($=$) This symbol means "the same as." For

example, $7 = 7$ means that both sides are the same.

WHY DO WE COMPARE THINGS?

We compare things all the time! For example, you might compare how many books you have with your friend's books. You might also compare which of the two balls is bigger. Comparing helps us understand the world around us and make decisions.

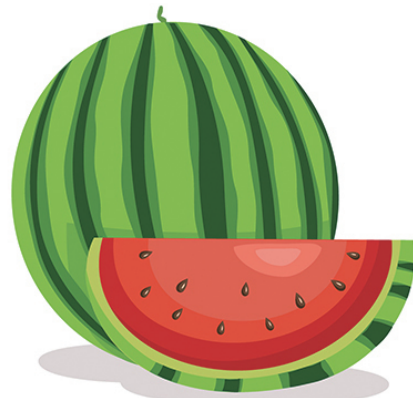

Activity: Which one is bigger? _____

Choose bigger fruit.
