UNIT 3 COMPARING LENGTHS AND HEIGHTS

UNDERSTANDING LENGTH AND HEIGHT COMPARISONS

In this section, we will explore how to compare the lengths and heights of different objects. Comparing these measurements is an essential skill that helps us understand the world.

How to Compare Lengths and Heights:

1 MEASURE FIRST

Start by measuring the length or height of different objects. You can use a ruler, measuring tape, or even your hands! For example, measure the size of your pencil and the height of a small plant.

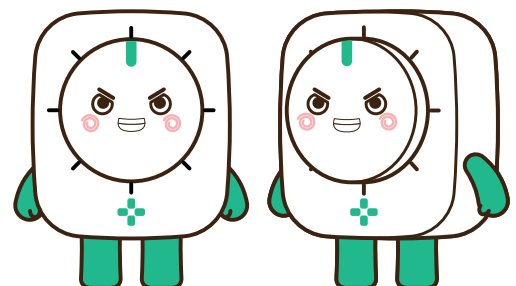

2 USE COMPARISON WORDS AND SYMBOLS

After measuring, you can use comparison words like "longer," "shorter," "taller," or "smaller." You can also use comparison symbols ($>$, $<$, $=$). For instance, if your pencil is 7 inches long and your friend's is 5 inches long, you can write $7 > 5$.

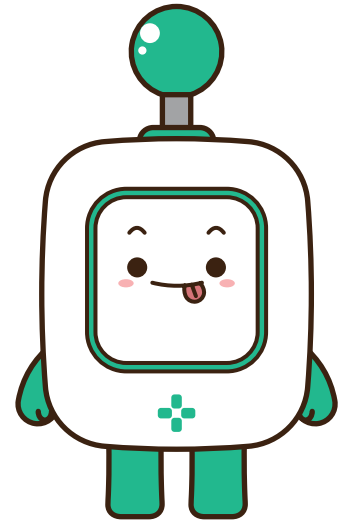

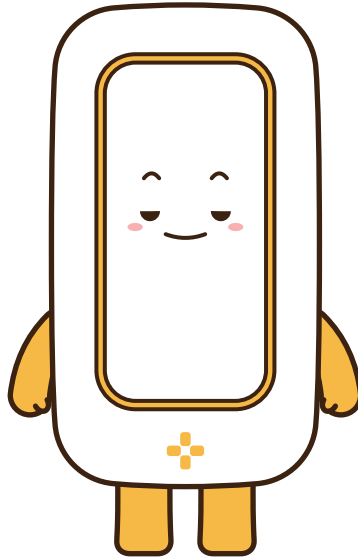

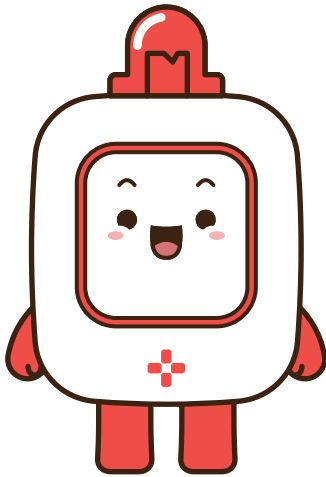

3 PRACTICE WITH DIFFERENT OBJECTS

Try comparing the heights of different items in your classroom, such as books, blocks, or even your desk and chair.

Activity: Which one is taller?

1 Who is tallest?

2 Who is shortest?

3 Arrange the Modians in order of their height.

Activity: Measuring and Comparing Heights

- Step 1** Choose two objects in your classroom, like a book and a water bottle.
- Step 2** Measure the height of both objects.
- Step 3** Use a comparison symbol to show which object is taller or shorter.

For example: "The book is taller than the water bottle" or "The water bottle is shorter than the book."

- Step 4** Share your findings with a classmate.
