CODING MADE EASY

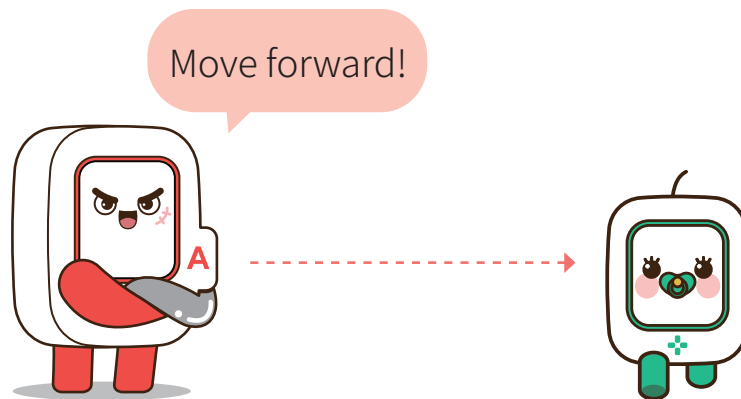

UNIT 1 WHAT IS PROGRAMMING?

WHAT IS PROGRAMMING?

Programming is like instructing a computer or robot to make it do something. Think of it as telling a robot what to do step by step, just like following a recipe to bake a cake. Each instruction tells the computer or robot how to act or what to do next.

HOW PROGRAMMING WORKS

When you program, you write down a list of instructions called "code." Each piece of code tells the computer to do something. For example, you might write a code that tells the robot to move forward, turn around, or even say hello!

WHY IS PROGRAMMING IMPORTANT?

Programming helps us create games, apps, and even robots! We can make the computer or robot do fun and helpful things by learning to program. It's like learning a new language that computers understand.

Let's Practice

: Example of a Programming a Robot

Imagine a robot named Robo that helps to water plants in a garden. Robo has to follow these rules:

- 1 Do not water if it is raining.
- 2 Water plant for every 2 days.

Let's check the dates when the plant needs to be watered.
