RECAP OF PROGRAMMING GRAMMAR

UNIT 1 THINKING IN ORDER

WHAT IS STEP-BY-STEP THINKING?

Step-by-step thinking involves doing things in a certain order to solve a problem. Imagine you are getting ready for school. What do you do first? You take a shower and brush your teeth, then put on your clothes, and finally you are ready to go to school. You follow a particular order to get prepared.

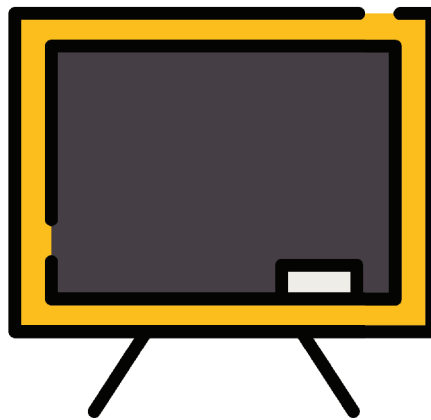

WHY IS ORDER IMPORTANT?

When we tell a computer or robot what to do, we must give instructions correctly. Otherwise, the program might not work correctly.

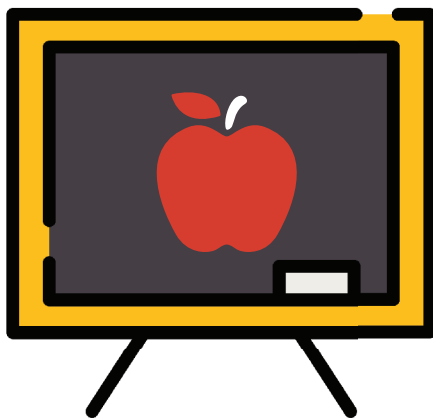

Example

1. Turn on the computer.

2. Open the drawing app.

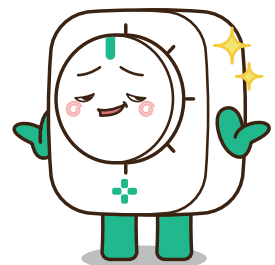

3. Draw a picture.

4. Save the picture.

Without turning on the computer, can we open the drawing app?

Let's practice

Let's create a simple program to draw a smiley face:

STEP 1

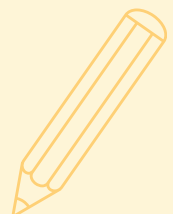

Draw a circle for the face.

STEP 2

Draw two smaller circles for the eyes.

STEP 3

Draw a curve for the smile.

Let's practice

Getting Dressed for Winter

- 1 Choose the first piece of clothing you need to wear.
- 2 Write down the order in which you should put on your clothes.

You can't put on your socks after you've already put on your shoes! That's why the order is important!
