UNIT 2 WHY LIGHT IS IMPORTANT IN OUR LIFE?

● Natural Light vs. Artificial Light

WHAT IS NATURAL LIGHT?

SUNLIGHT

The biggest natural light source is the sun. It shines brightly during the day and helps us see everything around us. When we go outside, sunlight lights up the world

MOONLIGHT

At night, the moon shines with a soft light from the sun. Moonlight makes the night sky glow and helps us see in the dark.

WHAT IS ARTIFICIAL LIGHT?

LAMPS AND LIGHT BULBS

These are lights we use inside our homes. Lamps and light bulbs make light when we turn them on. They help us see when it's dark or when we are indoors.

FLASHLIGHTS We can carry these small lights around. They are convenient when we need light under the bed or when we go camping.

FUN WITH LIGHT DIFFERENT LIGHTS WE USE:

NIGHT LIGHTS These small lights help us see in the dark without being too bright. They are often used in bedrooms to make us feel safe while we sleep.

DESK LAMPS These lights help us see better when reading or doing homework at our desks. They are bright and focused so that we can see our work.

STARS We can see stars twinkling in the sky at night. They are a special kind of light from far away in space.

ACTIVITY: FIND AND CIRCLE THE LIGHTS!

Look at the picture with different light sources. Your task is to:

FIND THE LIGHTS

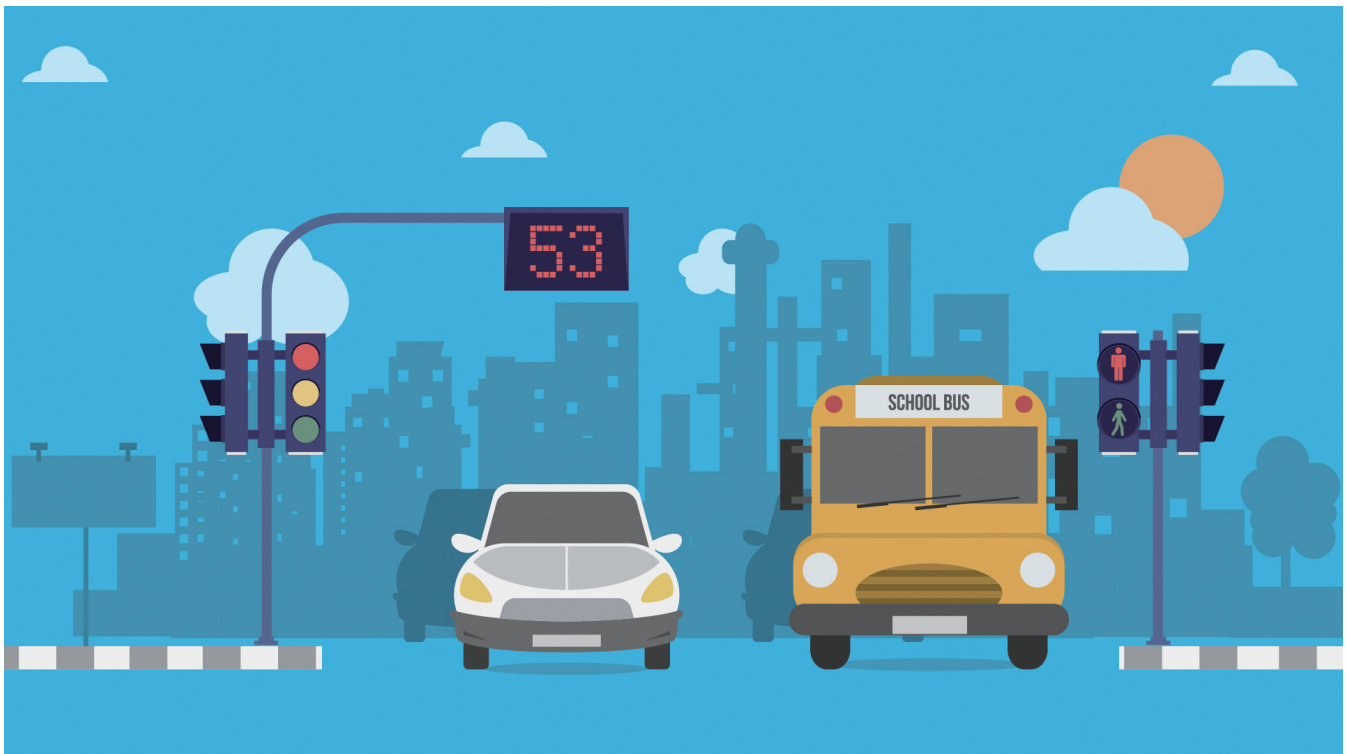

Look for all the light sources in the picture.

CIRCLE THE LIGHTS

Draw a circle around each light you find in the picture.

IDENTIFY THE LIGHT

Decide if the light is **Natural** or **Artificial**.

● Let's figure it out

Find the example of Natural and Artificial Light.

Natural

Artificial
