UNIT 3 SOFTWARE AND HARDWARE

WHAT IS SOFTWARE?

Software is like the brain of the computer. It tells the computer what to do. Software examples are games, apps, and programs like drawing or writing tools.

WHAT IS HARDWARE?

Hardware is the computer's physical parts that you can touch and see. Examples of hardware are the monitor (screen), keyboard, mouse, and the computer itself.

CHOOSING SOFTWARE

It would help to choose the right software when you need to do something on the computer. For example, open a drawing app to draw a picture. If you want to write a story, you use a writing program.

CHOOSING HARDWARE

Different tasks need different hardware. For example, to type a story, you need a keyboard. To watch a video, you need a monitor. Knowing which hardware to use helps you do things better on a computer.

Remember, software makes the computer work, and hardware is what you can touch and see!

Let's practice

Circle the HW (hardware) and mark the SW (software) with a triangle.
