UNIT 3 HELLO, MY ROBOT FRIEND

Meet MODI: Our Robot Friend

Now, let's meet a particular robot named MODI. MODI is a smart robot that can do many different things. MODI can follow instructions and rules, just like the robots we talked about before.

How MODI Uses Inputs & Outputs & Setups

MODI can understand the world around it and interact with it using inputs and outputs.

1. INPUTS : Inputs are ways MODI gets information.

INPUT MODULES

Button

Senses the status of the button

Dial

Senses the rotation of the dial

Environment

Senses temperature, humidity, illuminance, and sound

IMU

Senses slopes (Angles)

ToF

Senses distance

Joystick

Senses the direction of the stick

Inputs are green!

2. OUTPUTS : Outputs are ways MODI can respond or do something.

OUTPUT MODULES

Speaker

Make sounds

Motor A, B

Rotates

Display

Shows letters and images

LED

Emits light

Outputs are red!

3. SETUPS : Setups are modules essential for operation

SETUP MODULES

Battery

Supplies energy to the modules

Network

Connects modules to other modules, PCs, tablets, and phones

Setups are yellow!

UNPLUGGED

Activity 1 Environment Meter

Instructions:

- 1 Connecting Your MODI Modules: Just bring your modules close together, and they'll snap into place like magic, thanks to the magnets on their sides.
- 2 Powering Up Your Modules: There are two cool ways to make your modules come alive:
Use the Battery module for power for the connected modules.

- 3** Checking the Display: Your Display module will show 4 different types of information. The information is being transmitted from the Environment module to the Display module. Identify each of the information (among temperature, humidity, illuminance, and sound level), and fill in the blanks below.

Let's practice

Let's make a flashlight. Also, identify and categorize each module as either input, output, or setup.

Let's practice

Let's make an automatic light. Also, identify and categorize each module as either input, output, or setup.
