UNIT 3 SPRINKLER CREATION

WHAT IS SPRINKLER

A sprinkler is a tool for watering plants in a garden or yard. It looks like a little device that spreads water all around, just like rain!

Why is a
Sprinkler
Useful?

1. KEEPS PLANTS HEALTHY

It gives plants the right amount of water without needing to use a watering can.

2. EASY TO USE

Turn it on; it waters a significant area for you.

3. SAVES TIME

It's faster than watering each plant by hand.

MATERIALS NEEDED:

Battery

Dial

Motor A

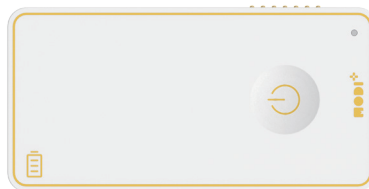

Module Connector

I-Horn

ASSEMBLE THE SPRINKLER:

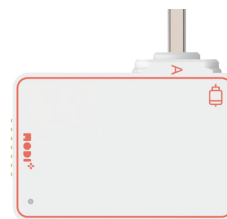

1 CONNECT THE DIAL MODULE

Connect Dial module and Battery.

2 ATTACH THE MOTOR

Connect Motor A to the Dial with Module Connector.

3 SET UP THE WATERING SYSTEM

Imagine that the motor is connected to a water source. When the motor spins, it will spray water like a natural sprinkler.

TEST YOUR SPRINKLER:

1 TURN THE DIAL

Turn the dial to change the speed. Notice how the motor spins faster or slower depending on the dial's position.

2 OBSERVE THE EFFECTS

Imagine how changing the speed affects how much water is sprayed. If the motor spins faster, more water comes out quickly.
