This PDF document is included in the unit materials.

UNIT 2 SOFTWARE AND HARDWARE

WHAT IS SOFTWARE?

- Software is like the brain of the computer. It tells the computer what to do. Software examples are games, apps, and programs like drawing or writing tools.

WHAT IS HARDWARE?

- Hardware is the computer's physical parts that you can touch and see. Examples of hardware are the monitor (screen), keyboard, mouse, and the computer itself.

CHOOSING SOFTWARE

- Choose the right software when you need to do something on the computer. For example, open a drawing app to draw a picture. If you want to write a story, you use a writing program.

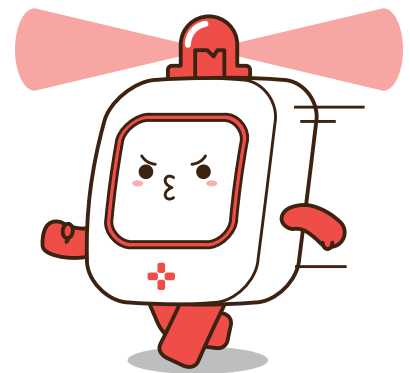

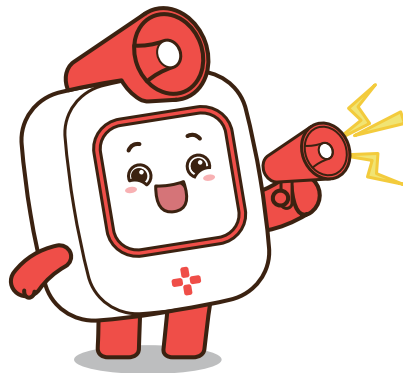

CHOOSING HARDWARE

- Different tasks need different hardware. For example, to type a story, you need a keyboard. To watch a video, you need a monitor. Knowing which hardware to use helps you do things better on a computer.

Remember, software makes the computer work, and hardware is what you can touch and see!

Let's practice

Circle the HW (hardware) and mark the SW (software) with a triangle.
