UNIT 2 WHAT IS AN ALERT SYSTEM?

UNDERSTANDING ALERT SYSTEMS

An alert system is a way to let people know if someone needs help. It can be a loud sound, a flashing light, or a message. These systems are essential for keeping people safe.

Can you find an example of an alert system in our daily lives?

WHY DO WE USE ALERT SYSTEMS?

Alert systems help tell us when something is happening. For example, a smoke detector rings loudly if there's smoke nearby, warning us of danger. It helps us act quickly to stay safe.

HOW DO ALERT SYSTEMS WORK?

Alert systems work by sending signals. Here are some examples:

FIRE ALARMS

These make a loud noise to warn us if there is a fire.

DOORBELLS

These let us know when someone is at the door.

MEDICAL ALERTS

These help people call for help if they are sick or hurt.

ACTIVITY: FLASHLIGHT WITH MODI

Create a Simple Flashlight

1 MATERIALS NEEDED

LED

Button

Battery

2 MAKE IT WORK

Connect the button to the LED using the battery. When you press the button, the LED should light up.

3 TEST IT OUT

Try pressing the button to see how it works. Imagine how this could help someone in need.

WHY IS THIS IMPORTANT?

Flashlights help keep us safe by providing light in dark places. They are essential for people needing extra help, like our elderly neighbors or friends with disabilities.

● Let's think about more

By exploring our neighborhood and learning about creating flashlights, we can think of new ways to help the people around us. This makes our community a better place for everyone!
